SPECIALIZED DISCLOSURE REPORT

DEERE & COMPANY

(Exact name of the registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

1-4121
(Commission File Number)

36-2382580
(IRS Employer
Identification No.)

One John Deere Place, Moline, Illinois
(Address of principal executive offices)

61265
(Zip Code)

Edward R. Berk
Corporate Secretary
(309) 765-8000

(Name and telephone number, including area code, of the
person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this Form is being filed, and provide the period to which the information in this Form applies:

 X Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2022.

 Rule 13q-1 under the Securities Exchange Act (17 CFR 240.13q-1) for the fiscal year ended _____.

Section 1 – Conflict Minerals Disclosure

Items 1.01 and 1.02 Conflict Minerals Disclosure and Report; Exhibit

A copy of Deere & Company's Conflict Minerals Report for the year ended December 31, 2022, is provided as Exhibit 1.01 hereto and is publicly available at <https://investor.deere.com/governance>. Information contained on Deere & Company's website is not part of, nor incorporated by reference into, this Form SD or the Conflict Minerals Report.

Section 3 – Exhibits

Item 3.01 Exhibits

Exhibit 1.01 – Conflict Minerals Report for the year ended December 31, 2022, as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this Report to be signed on its behalf by the duly authorized undersigned.

DEERE & COMPANY

CONFLICT MINERALS REPORT

May 18, 2023

Section I: Introduction and Company Overview

This Conflict Minerals Report is presented to comply with Securities and Exchange Commission Rule 13p-1 under the Securities Exchange Act of 1934 (“SEC Rule”). Deere & Company (“Company”) and its subsidiaries (collectively, “John Deere”) manufacture and distribute agriculture and turf and construction and forestry equipment and parts. For the period from January 1 to December 31, 2022 (“Reporting Period”), certain components and parts of John Deere’s equipment products contained columbite-tantalite (coltan) (or its derivative tantalum), gold, wolframite (or its derivative tungsten), and/or cassiterite (or its derivative tin) (collectively, “conflict minerals”) necessary to the production or functionality of such equipment.

As part of its efforts, the Company has adopted a policy (“Conflict Minerals Policy”) providing a common set of principles for the sourcing of conflict minerals. In accordance with the SEC Rule, the Company implemented a Reasonable Country of Origin Inquiry (“RCOI”) to determine whether any conflict minerals necessary to the production or functionality of its products (“In-Scope Components”) have originated in the Democratic Republic of the Congo or an adjoining country (“Covered Countries”) or have not come from recycled or scrap sources.

As described in Section II below, the Company identified its In-Scope components and conducted a RCOI, which included the Company’s Conflict Minerals Policy, initial component assessment, and identification of suppliers providing In-Scope Components. The supplier survey used the Conflict Minerals Reporting Template (“CMRT”) which is the current industry standard for collecting conflict minerals RCOI data from upstream companies. Smelter data along with supplier responses indicated the need to execute due diligence as outlined in the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (“OECD Guidelines”).

The Company’s due diligence procedures described in Sections III and IV conform, in all material respects, with the framework set forth in the OECD Guidelines and the related supplements for gold and for tin, tantalum and tungsten. The due diligence procedures are implemented and maintained throughout the Company’s supply chain. In accordance with the Company’s Conflict Minerals Policy, the SEC Rule and the OECD Guidelines, the Company has established a due diligence process with the following key components: (1) internal supply management systems and controls; (2) identification and assessment of conflict minerals risk in the supply chain; (3) strategies to address identified risks within the supply chain; and (4) independent audit procedures as required by the SEC Rule. The Company performs due diligence procedures described below on its In-Scope Components.

Sections III and IV of this report also describe the due diligence procedures performed by the Company on the source and chain of custody of In-Scope Components for the Reporting Period. Section V describes the results of the due diligence procedures, Section VI describes the efforts to determine the origin of mines or country of origin and Section VII sets forth the steps the Company is taking to continue improving its due diligence process.

Schedule A describes the facilities used to process the Covered Minerals in those In-Scope Components if known to the Company, and Schedule B describes the country of origin of the Covered Minerals in those In-Scope Components if known to the Company.

Section II: Products Containing In-Scope Components and Reasonable Country of Origin

The Company's equipment operations include three business segments. The *production and precision agriculture* segment defines, develops, and delivers global equipment and technology solutions for production-scale growers of large grains, small grains, cotton, and sugar. The segment's main products include large and certain mid-size tractors, combines, cotton pickers, sugarcane harvesters and loaders, and soil preparation, seeding, application and crop care equipment. The *small agriculture and turf* segment defines, develops, and delivers global equipment and technology solutions for dairy and livestock producers, high-value crop producers, and turf and utility customers. The segment's primary products include certain mid-size and small tractors, as well as hay and forage equipment, riding and commercial lawn equipment, golf course equipment, and utility vehicles. The *construction and forestry* segment defines, develops, and delivers a broad range of machines and technology solutions organized along earthmoving, forestry and roadbuilding production systems. The segment's primary products include crawler dozers and loaders, four-wheel-drive loaders, excavators, skid-steer loaders, milling machines, and log harvesters.

As a result of the due diligence procedures described in Section IV below, the Company believes the equipment products described above contain In-Scope Components.

John Deere conducted a good faith RCOI to determine whether conflict minerals found in its products may have originated in the Covered Countries and did not come from recycled or scrap sources. John Deere used the CMRT to obtain information regarding the smelters and refiners that provide materials to its supply chain. John Deere received responses from suppliers representing 96% of the volume for In-Scope Components that may contain conflict minerals. Based on the RCOI, the Company believes that some of the conflict minerals necessary to the production or functionality of its equipment manufactured in the Reporting Period may have originated in the Covered Countries and may not be from recycled or scrap sources (the "Covered Minerals").

Section III: Design Due Diligence Framework

John Deere's conflict minerals due diligence management system is designed in conformance with the OECD Guidelines. The OECD Guidelines are the framework for a risk-based approach to due diligence for responsible supply chains of conflict minerals. John Deere follows this framework through the steps identified in Section IV.

Section IV: Due Diligence Measures Performed

Establish Strong Company Management System

The Company's Conflict Minerals Policy establishes the principles regarding the responsible sourcing of conflict minerals against which the Company can assess itself and its suppliers. To enforce the Conflict Minerals Policy, the Company has put in place internal supply management systems and controls. The Company's management structure consists of three levels of oversight.

In accordance with the OECD Guidelines, at the top of the management structure is an executive sponsor. The executive sponsor is a member of the Company's senior management team. The second level of management is a steering committee comprised of executive-level officers and managers from the following functions: supply management, environmental, energy and product sustainability, electronic solutions, and legal. This committee provided guidance and oversight to the third level of the management system for conflict minerals. The third level of the management system is a team of subject matter experts ("CM Team") from relevant functions within the Company, including supply management, environmental,

quality, information technology, internal audit, and legal. The CM Team is responsible for implementing the Company's due diligence procedures. In accordance with the Company's Conflict Minerals Policy and the OECD Guidelines, the Company will maintain, and will require In-Scope Suppliers (as defined below) to maintain, conflict minerals records for five years.

Identify and Assess Risks in the Supply Chain

Due to the size and complexity of John Deere's global supply chain as well as its considerable number of suppliers, products, parts and components, a process was developed to assess and remove parts not containing conflict minerals from the inquiry. The RCOI pertains only to suppliers with In-Scope Components ("In-Scope Suppliers") introduced into John Deere's supply chain during the Reporting Period. In-Scope Components include all parts in Material Group Codes that could potentially contain conflict minerals (Tin, Tungsten, Tantalum, or Gold). Parts, components, or products not containing conflict minerals were excluded from further inquiry.

The Company's RCOI is comprised of three processes: the first collects information on the Company's equipment components ("Equipment Survey"); the second collects information on the Company's electronics components ("Electronics Survey"); and the third collects information on the Company's after-market parts division ("All-Makes Survey" and, collectively with the Equipment Survey and the Electronics Survey, the "Surveys"). In each case, the survey covers In-Scope Suppliers of In-Scope Components during the Reporting Period.

The Equipment Survey randomly selected In-Scope Suppliers based on volume of In-Scope Components provided to the Company during the Reporting Period. These suppliers were then ranked based on the total volume of In-Scope Components supplied to the Company for the Reporting Period. The In-Scope Suppliers were then separated into groups according to volume of parts supplied to the Company: high volume (supplying 80 percent of In-Scope Components), mid-volume (supplying 15 percent of In-Scope Components), and low volume (supplying 5 percent of In-Scope Components). The In-Scope Suppliers were then randomly selected from these groups such that the survey covered a minimum of 80 percent of volume from the high-volume group, 18 percent of volume from the mid-volume group and 2 percent of volume from the low-volume group. The All-Makes Survey followed a similar selection process to the Equipment Survey.

The Electronics Survey randomly selected In-Scope Suppliers based on volume of In-Scope Components provided to the Company during the Reporting Period. These suppliers were then ranked based on the total volume of In-Scope Components supplied to the Company for the Reporting Period. The In-Scope Suppliers were then separated into groups according to volume of parts supplied to the Company: high- volume (supplying 98 percent of In-Scope Components) and low-volume (supplying 2 percent of In-Scope Components). The In-Scope Suppliers were then randomly selected from these groups such that the survey covered 100 percent of volume from the high-volume group and 15 percent of suppliers from the low-volume group. The selection process for the Electronics Survey accounts for the greater predominance of In-Scope Components in electronic components.

Design and Implement a Strategy to Respond to Identified Risks

The Company has established and implemented a strategy to respond to risks identified in its supply chain. A steering team was apprised of any concerns identified during the conflict minerals compliance process including actual and potential risks and any red flags identified in the supply chain related to conflict minerals. The executive officer signing the Company's Form SD is also informed on the Company's

conflict minerals process and status including its survey to the supply chain, design of the due diligence process, and results of the due diligence activities completed.

Suppliers that have submitted smelters that are not fully compliant (smelters of interest) with the Responsible Minerals Assurance Process (“RMAP”) (formerly the Conflict-Free Smelter Program) are requested to review those smelters and modify their sourcing actions to either discontinue use of the smelters or assure the smelters become compliant. Suppliers that do not respond to the conflict minerals survey are required to complete the survey in the following year’s conflict minerals campaign. If suppliers continue to not respond, they are moved to high risk in the Company’s Supply Chain Risk Management system and required to complete corrective actions to remediate the situation. Failure to complete the corrective actions may lead to termination of our business relationship.

Carry out Third Party Audit of Supply Chain Due Diligence at Identified Points in the Supply Chain

The Company collected conflict minerals data from the identified In-Scope Suppliers for each unique part supplied to the Company during the Reporting Period. Each In-Scope Supplier surveyed was required to make part-specific or company-specific declarations to the Company. The Surveys used the standard industry reporting template, the CMRT, published by the Responsible Minerals Initiative (“RMI”), to review conflict minerals risk within the supply chain and identify smelters of origin. The Company used its proprietary software system to conduct the Equipment Survey. The system enabled the Company to communicate with In-Scope Suppliers, to make an initial risk assessment, and to assist In-Scope Suppliers in completing the CMRT accurately. The Company used other tools and resources to conduct the Electronics Survey and All-Makes Survey in a manner aligned with the approach of the Equipment Survey.

In all cases, In-Scope Suppliers were asked to complete the survey within eight weeks after receipt of the request. Additionally, In-Scope Suppliers were required to automatically update their responses with a new CMRT should an In-Scope Component that is the subject of a CMRT change during the Reporting Period. In accordance with the OECD Guidelines, the Company relies on third party audits by RMAP to validate the conflict free status of mineral smelters.

The Equipment Survey yielded complete CMRTs from approximately 82 percent of the In-Scope Suppliers surveyed, representing approximately 99 percent of the In-Scope Component volume from those suppliers. The Electronics Survey received complete CMRTs from approximately 91 percent of the In-Scope Suppliers surveyed, representing approximately 87 percent of the In-Scope Component volume from the In-Scope Components of those suppliers. The All-Makes Survey received complete CMRTs from approximately 71 percent of the In-Scope Suppliers surveyed, representing approximately 96 percent of the In-Scope Component volume from these suppliers. On a combined basis, the Company received complete CMRTs from approximately 83 percent of its In-Scope Suppliers surveyed, representing approximately 96 percent of the Company’s In-Scope Component volume from these suppliers.

The CM Team evaluated the CMRTs and assessed a risk level for each In-Scope Supplier response. The risk evaluation was based on the risks outlined in the OECD Guidelines. Based on the risk evaluation, the CM Team determined whether further due diligence was required on any In-Scope Supplier. The CM Team contacted certain In-Scope Suppliers to verify the information provided on the CMRT. Suppliers conduct similar conflict minerals campaigns with their supply base, and the Company understands it can take multiple tiers of suppliers to get to the smelter source material. Based on the timing of the Company’s campaign and the data collection, smelter information reported can be 12 to 24 months delayed.

Report on Supply Chain Diligence

In accordance with the SEC Rule and the OECD Guidelines, this Conflict Minerals Report is available on the Company's website at <https://investor.deere.com/governance/>. The Company's Conflict Minerals Policy is available on its website at <https://investor.deere.com/governance/>. Information contained on the Company's website or otherwise actively linked to this Conflict Minerals Report is not part of, nor incorporated by reference into, this Conflict Minerals Report or the Company's Form SD.

Section V: Due Diligence Results

The Company is a member of RMI and supports its effort to ensure smelters are compliant as conflict-free, including the RMAP that identifies smelters and refiners having systems in place to assure sourcing of conflict free materials.

The Company relies on its suppliers to provide information on the origin of conflict minerals contained in the material supplied to the Company. In turn, those suppliers are reliant on the information supplied by their suppliers. The responses received from the Company's campaign survey identified 453 unique smelters identified by RMAP of which 367, or approximately 81%, were validated as conformant or in process under RMAP as of April 1, 2023. Fifty-four of the smelters have discontinued operations or are not identified as smelters, and 29 or approximately 6% are non-conformant. The due diligence process has been initiated regarding all smelters not validated as conformant.

The Company intends to continue its due diligence efforts on its conflict minerals supply chain. The Company's due diligence procedures will continue to develop by engaging In-Scope Suppliers to improve transparency throughout the supply chain. In accordance with the Company's Conflict Minerals Policy, it will continue incorporating conflict minerals obligations into its supplier contracts. The Company continued to incorporate the Conflict Minerals Supplier Response into the supplier evaluation process. The Company's due diligence procedures also support the continuing enforcement of its Conflict Minerals Policy and its Supplier Code of Conduct.

Section VI: Efforts to Determine Mine or Country of Origin

John Deere's efforts to determine the origin of mines or country of origin of the conflict minerals in its supply chain include maintaining membership with RMI and supporting RMI efforts for smelter validation and process due diligence. The Company will continue to implement due diligence measures for its supply base and require applicable suppliers to submit CMRT information.

Section VII: Steps Taken to Mitigate Risks

John Deere is taking the following steps to continue to improve its due diligence process:

- Expand the due diligence process to better cover our Wirtgen operations, Electronics, and All-Makes survey campaigns;
 - Continue working with RMI to expand the smelters and refiners that are participating in and are compliant with the RMAP process;
 - Continue requiring direct material suppliers to acknowledge our Supplier Code of Conduct and support the Conflict Minerals process; and
 - Encourage suppliers that utilize smelters of conflict minerals to assure they are using validated smelters whenever possible.
-

FORWARD-LOOKING STATEMENTS

Certain statements contained herein, including in the section entitled “Introduction and Company Overview” relating to future events, expectations, and trends constitute “forward-looking statements” as defined in the Private Securities Litigation Reform Act of 1995 and involve factors that are subject to change, assumptions, risk and uncertainties that could cause actual results to differ materially.

Forward-looking statements are based on currently available information and current assumptions, expectations, and projections about future events and should not be relied upon. Examples of forward-looking statements include statements relating to the Company’s ability to effectively continue its due diligence efforts on the conflict minerals in its supply chain, ability to require the Company’s suppliers to acknowledge and comply with the Company’s supplier policies and due diligence processes and the Company’s ability to implement future due diligence processes effectively. Except as required by law, the Company undertakes no obligation to update or revise its forward-looking statements. Further information concerning the Company and its businesses, including factors that could materially affect the Company’s compliance with governmental regulations, is included in Company’s other filings with the SEC (including, but not limited to, the risk factors discussed in Item 1A. “Risk Factors” of the Company’s most recent Annual Report on Form 10-K and the Company’s subsequent Quarterly Reports on Form 10-Q).
