### McDermott Completes Pipeline Installation for Greater Western Flank Phase 2 Project in Australia

- Fabrication, transportation, installation and testing of pipeline and subsea infrastructure phase for the project completed
- Strong execution planning, vertical integrated in-house fabrication and offshore automatic welding capabilities from McDermott

- Close working relationship with client was key to success

PERTH, Australia, Sept. 4, 2018 /PRNewswire/ -- McDermott International, Inc. (NYSE: MDR) announced today it has successfully completed the contract for phase two of the Greater Western Flank project. The contract was awarded by Woodside Energy Ltd in January 2016.

McDermott was responsible for the procurement, fabrication, installation and testing of a series of pipeline buckle initiators, pipeline end terminations and foundation mudmats, in-line tee structures and approximately 21 miles (35 kilometers) of a 16-inch (40 centimeters) corrosion resistant alloy (CRA) pipeline extending from the existing Goodwyn A Platform to the Lady Nora and Pemberton field manifold locations.

"McDermott's strong execution capability is one of the reasons why clients continue to entrust their most important projects to us," said Ian Prescott, McDermott's Senior Vice President for Asia Pacific. "Greater Western Flank 2 is a testament to our execution, preparation and vertical integration capabilities. It shows McDermott can deliver challenging projects in challenging environments."

"One of the key challenges of the project was to perform installation work inside the 546 yards (500 meters) safety zone of Woodside's Goodwyn A Platform," said Vince Vieraitis, McDermott's GWF-2 Project Director. "Through close collaboration with the client, the project was delivered in full compliance to project specifications with zero lost time incidents."

McDermott deployed two of its specialty vessels to complete the installation phase, namely DLV 2000 for the pipelay campaign and the Lay Vessel 108 for the pre-lay and post-lay campaign. McDermott also set up an onshore portable and temporary double jointing facility at its Batam fabrication yard in Indonesia to simulate the offshore installation campaign.

#### **Project Details**

The Greater Western Flank Phase 2 fields lie in water depths varying between 262 feet (80 meters) and 426 feet (130 meters) at approximately 29 to 37 miles (40 to 60 kilometers) southwest of the Goodwyn A Platform, located off the northwest coast of western Australia. It includes the development of eight wells from the Keast, Dockrell, Lady Nora, Pemberton, Sculptor and Rankin fields. Gas production is tied-back via the pipeline end termination, in-line tees and subsea pipeline to the platform. The project is expected to achieve first gas by the end of this year.

#### **About McDermott**

McDermott is a premier, fully integrated provider of technology, engineering and construction solutions to the energy industry. For more than a century, customers have trusted McDermott to design and build end-to-end infrastructure and

technology solutions—from the wellhead to the storage tank—to transport and transform oil and gas into the products the world needs today. Our proprietary technologies, integrated expertise and comprehensive solutions deliver certainty, innovation and added value to energy projects around the world. Customers rely on McDermott to deliver certainty to the most complex projects, from concept to commissioning. It is called the "One McDermott Way." Operating in over 54 countries, McDermott's locally focused and globally-integrated resources include approximately 40,000 employees and engineers, a diversified fleet of specialty marine construction vessels and fabrication facilities around the world. As used in this press release, McDermott includes McDermott International, Inc. and its subsidiaries and affiliates. To learn more, visit [www.mcdermott.com](http://www.mcdermott.com).
