Cautionary Statement

This presentation contains forward-looking statements within the meaning of the federal securities laws relating to Phillips 66's operations, strategy and performance. Words such as "anticipated," "estimated," "expected," "planned," "scheduled," "targeted," "believe," "continue," "intend," "will," "would," "objective," "goal," "project," "efforts," "strategies," "priorities" and similar expressions that convey the prospective nature of events or outcomes generally indicate forward-looking statements. However, the absence of these words does not mean that a statement is not forward-looking. Forward-looking statements included in this presentation are based on management's expectations, estimates and projections as of the date they are made. These statements are not guarantees of future events or performance, and you should not unduly rely on them as they involve certain risks, uncertainties and assumptions that are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed or forecast in such forward-looking statements. Factors that could cause actual results or events to differ materially from those described in the forward-looking statements include: changes in governmental policies relating to NGL, crude oil, natural gas, refined petroleum or renewable fuels products pricing, regulation or taxation, including exports; our ability to timely obtain or maintain permits, including those necessary for capital projects; fluctuations in NGL, crude oil, refined petroleum products, renewable fuels, renewable feedstocks and natural gas prices, and refined product, marketing and petrochemical margins; the effects of any widespread public health crisis and its negative impact on commercial activity and demand for our products; changes to government policies relating to renewable fuels and green house gas emissions that adversely affect programs including the renewable fuel standards program, low carbon fuel standards and tax credits for biofuels; liability resulting from pending or future litigation or other legal proceedings; liability for remedial actions, including removal and reclamation obligations under environmental regulations; unexpected changes in costs or technical requirements for constructing, modifying or operating our facilities or transporting our products; our ability to successfully complete, or any material delay in the completion of, any asset disposition, acquisition, shutdown or conversion that we may pursue, including receipt of any necessary regulatory approvals or permits related thereto; unexpected technological or commercial difficulties in manufacturing, refining or transporting our products, including chemical products; the level and success of producers' drilling plans and the amount and quality of production volumes around our midstream assets; risks and uncertainties with respect to the actions of actual or potential competitive suppliers and transporters of refined petroleum products, renewable fuels or specialty products; changes in the cost or availability of adequate and reliable transportation for our NGL, crude oil, natural gas and refined petroleum and renewable fuels products; failure to complete definitive agreements and feasibility studies for, and to complete construction of, announced and future capital projects on time or within budget; our ability to comply with governmental regulations or make capital expenditures to maintain compliance; limited access to capital or significantly higher cost of capital related to our credit profile or illiquidity or uncertainty in the domestic or international financial markets; damage to our facilities due to accidents, weather and climate events, civil unrest, insurrections, political events, terrorism or cyberattacks; domestic and international economic and political developments including war and armed hostilities, instability in the financial services and banking sector, excess inflation, expropriation of assets and changes in fiscal policy, including interest rates; international monetary conditions and exchange controls; changes in estimates or projections used to assess fair value of intangible assets, goodwill and properties, plants and equipment and/or strategic decisions or other developments with respect to our asset portfolio that cause impairment charges; substantial investments required, or reduced demand for products, as a result of existing or future environmental rules and regulations, including greenhouse gas emissions reductions and reduced consumer demand for refined petroleum products; changes in tax, environmental and other laws and regulations (including alternative energy mandates) applicable to our business; political and societal concerns about climate change that could result in changes to our business or increase expenditures, including litigation-related expenses; the operation, financing and distribution decisions of our joint ventures that we do not control; the potential impact of activist shareholder actions or tactics; and other economic, business, competitive and/or regulatory factors affecting Phillips 66's businesses generally as set forth in our filings with the Securities and Exchange Commission. Phillips 66 is under no obligation (and expressly disclaims any such obligation) to update or alter its forward-looking statements, whether as a result of new information, future events or otherwise.

Non-GAAP Measures— This presentation includes non-GAAP financial measures, including "sustaining capital," "growth capital," "adjusted EBITDA," "average adjusted EBITDA," "adjusted ROCE," "average adjusted ROCE," "net debt-to-capital ratio," and "refining adjusted controllable costs". These are non-GAAP financial measures that are included to help facilitate comparisons of operating performance across periods and to help facilitate comparisons with other companies in our industry. Where applicable, these measures exclude items that do not reflect the core operating results of our businesses in the current period or other adjustments to reflect how management analyzes results. You can find reconciliations to, or further discussion of, the most comparable GAAP financial measures within or at the end of the presentation materials.

This presentation also includes the terms "growth capital," "sustaining capital," "net debt-to-capital ratio target," "shareholder distributions" or "return of operating cash to shareholders," "adjusted EBITDA," "mid-cycle adjusted EBITDA," "controllable costs" and "refining adjusted controllable costs," which, as used in certain places herein, are forward looking non-GAAP financial measures. You can find further discussion of these measures, including the most comparable GAAP financial measures, within or at the end of the presentation materials. Growth capital and sustaining capital are both components of total capital expenditures, which is the most directly comparable GAAP financial measure. Net debt-to-capital ratio represents the ratio between total debt and total equity, exclusive of total cash, that we expect to achieve over time. EBITDA is defined as estimated net income plus estimated net interest expense, income taxes, and depreciation and amortization. Adjusted EBITDA is defined as estimated EBITDA plus the proportional share of selected equity affiliates' estimated net interest expense, income taxes, and depreciation and amortization less the portion of estimated adjusted EBITDA attributable to noncontrolling interests. Net income is the most directly comparable GAAP financial measure for the consolidated company and income before income taxes is the most directly comparable GAAP financial measure for operating segments. Mid-cycle adjusted EBITDA is defined as the average adjusted EBITDA targeted over a complete economic cycle.

Adjusted EBITDA and mid-cycle adjusted EBITDA estimates or targets that depend on future levels of revenues and/or expenses, including amounts that will be attributable to noncontrolling interests or related to joint ventures, which are not reasonably estimable at this time. Accordingly, we cannot provide a reconciliation of projected adjusted EBITDA, mid-cycle adjusted EBITDA or run-rate adjusted EBITDA to consolidated net income or segment income before income taxes without unreasonable effort. The 2022 mid-cycle adjusted EBITDA target has not been adjusted to reflect the impact of the recast discussed below in "Basis of Presentation."

References in the presentation to earnings refer to net income attributable to Phillips 66. References in the presentation to shareholder distributions or return of operating cash to shareholders refer to the sum of dividends paid to Phillips 66 stockholders, the amount paid to repurchase shares of Phillips 66 common stock on the open market and the fair value of shares of Phillips 66 common stock acquired in an exchange transaction. References to free cash flow refers to net cash provided by operating activities less capital expenditures.

Basis of Presentation - Effective April 1, 2024, we changed the internal financial information reviewed by our chief executive officer to evaluate performance and allocate resources to our operating segments. This included changes in the composition of our operating segments, as well as measurement changes for certain activities between our operating segments. The primary effects of this realignment included establishment of a Renewable Fuels operating segment, which includes renewable fuels activities and assets historically reported in our Refining, Marketing and Specialties (M&S), and Midstream segments; change in method of allocating results for certain Gulf Coast distillate export activities from our M&S segment to our Refining segment; reclassification of certain crude oil and international clean products trading activities between our M&S segment and our Refining segment; and change in reporting of our 16% investment in NOVONIX from our Midstream segment to Corporate and Other. Accordingly, prior period results have been recast for comparability.

In the third quarter of 2024, we began presenting the line item "Capital expenditures and investments" on our consolidated statement of cash flows exclusive of acquisitions, net of cash acquired. Accordingly, prior period information has been reclassified for comparability.

Phillips 66 and Refining results included herein through September 30, 2025, includes our proportional share of WRB Refining LP equity earnings and beginning October 1, 2025, includes 100% of Borger Refinery and Wood River Refinery consolidated due to the acquisition of the remaining 50% of WRB.

A.I. Enables Reliability, Productivity, and Margin Improvements

Selected Use Cases

Operations

Margin optimization

- Identify real-time margin opportunities
- Optimize blending decisions to improve product mix
- Identify lost-profit opportunities through knowledge assistant

Operational availability

- Enable predictive, condition-based maintenance to improve reliability and reduce downtime
- Improve troubleshooting through AI-assisted issue identification

Safe operations

- Enhance work planning through improved access to historical field incidents
- Detect methane leaks earlier and accelerate response actions

Commercial & Marketing

- Synthesize internal and external data to identify arbitrage opportunities in real time
- Deliver near real-time visual insights for new gas station proposals to accelerate speed-to-deal
- Improve customer service through an AI-enabled assistant

Enterprise

- Increase productivity through workflow automation agents that reduce manual work
- Improve access to enterprise knowledge and intelligence through an enterprise-wide AI platform
