

NEWS RELEASE

nVent Recognized as a Top Ten Data Solutions Provider

5/31/2023

LONDON--(BUSINESS WIRE)-- nVent Electric plc (NYSE: NVT) ("nVent"), a global leader in electrical connection and protection solutions, today announced it has been named a Top 10 Data Solutions Provider by CIO Applications magazine.

The rise of AI applications, cloud computing and demand for constant uptime is increasing pressure on data center managers to optimize infrastructure to support next generation IT equipment. nVent offers a systems approach to the data center industry, delivering reliable, scalable and innovative cooling, physical security and power distribution solutions.

Liquid cooling is a primary driver in data center growth. As changes in technology continue to accelerate, data centers need partners like nVent to help them scale their operations and keep up with the newest advances. nVent solutions focus on the "heart" and the "brain" of data centers—coolant distribution units (CDUs) and power distribution units (PDUs), respectively.

nVent drives a solutions and systems approach to data solutions with a unique set of capabilities: its intelligent PDUs bring leading solutions for power quality and density, its data cooling offers efficient designs, and its cable and system protection is flexible and modular.

"We are dedicated to creating industry-leading solutions for our customers and assisting them at every step of their data center journey," said Marc Caiola, VP of nVent Global Data Solutions.

CIO Applications also highlighted nVent's work to supply products and solutions that help drive sustainability for its customers, as well as its focus on operating more sustainably. nVent's solutions can be deployed to help customers

realize their energy efficiency and decarbonization goals, which contributed to the company's Silver Sustainability Rating from EcoVadis.
