

EXHIBIT 1.01

Altra Industrial Motion Corp. Conflict Minerals Report For The Year Ended December 31, 2018

This is the Conflict Minerals Report of Altra Industrial Motion Corp. for calendar year 2018, in accordance with Rule 13p-1 under the Securities Exchange Act of 1934 (“1934 Act”). Please refer to Rule 13p-1, Form SD and the 1934 Act Release No. 34-67716¹ for definitions to the terms used in this Conflict Minerals Report (this “Report”), unless otherwise defined herein.

Overview

Rule 13p-1 of the 1934 Act (the “Conflict Minerals Rule”) requires disclosure of certain information when a company manufactures or contracts to manufacture products, and the “conflict minerals” specified in the Conflict Minerals Rule are necessary to the functionality or production of those products. For purposes of the Conflict Minerals Rule, “conflict minerals” include: columbite-tantalite (“tantalum”), cassiterite (“tin”), wolframite (“tungsten”), and gold (collectively referred to in this Report as “3TG”).

This Report has been prepared by Altra Industrial Motion Corp. (herein referred to as “Altra”, “we”, “us” or “our”). The information in this Report includes the activities of all subsidiaries owned or controlled by Altra that are required to be consolidated for purposes of this Report. This Report covers products (i) for which 3TG are necessary to the functionality or production of those products; (ii) that were manufactured, or contracted to be manufactured, by Altra; and (iii) for which the manufacture was completed during the reporting period from January 1, 2018 to December 31, 2018 (the “Reporting Period”). These products are collectively referred to in this Report as the “Covered Products”.

Our Products

Altra is a premier industrial, global manufacturer and supplier of electromechanical power transmission, motion control and automation products, including highly engineered power transmission, motion control and engine braking systems and components. Altra’s portfolio consists of 27 well-respected brands including Bauer Gear Motor, Boston Gear, Jacobs Vehicle Systems, Kollmorgen, Portescap, Stromag, Svendborg Brakes, TB Wood’s, Thomson and Warner Electric.

¹ Final Rule: Conflict Minerals, Release No. 34-67716 (August 22, 2012), available at <http://www.sec.gov/rules/final/2012/34-67716.pdf>.

Compliance with the Conflict Minerals Rule

Altra is fully committed to complying with Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, which aims to prevent the use of 3TG that directly or indirectly finance or benefit armed groups in the Democratic Republic of the Congo or adjoining countries (including Angola, Burundi, The Central African Republic, The Republic of Congo, Uganda, Rwanda, South Sudan, Tanzania, and Zambia) (collectively, the "Covered Countries").

In accordance with the Conflict Minerals Rule, Altra undertook measures reasonably designed to (i) identify whether there are any 3TG included in, and necessary to the functionality or production of, products manufactured, or contracted to be manufactured, by Altra, and for which the manufacture was completed during the Reporting Period, and if so, (ii) determine whether any of the 3TG originated in the Covered Countries, or are from recycled or scrap sources. Altra's processes are described in detail below.

While Altra takes compliance with the Conflict Minerals Rule very seriously, as a company engaged in the manufacture and supply of electromechanical power transmission, motion control and automation products, Altra's global supply chain is complex, and Altra is several levels removed from the actual mining of any potential 3TG that may be contained in its final products. Furthermore, Altra does not purchase raw ore or unrefined 3TG, or make purchases from the Covered Countries. Altra must therefore rely on its suppliers to provide information regarding the origin of 3TG that are included in the Covered Products. Moreover, Altra believes that the smelters and refiners in Altra's supply chain -- who Altra typically does not know due to being so far removed from them in the supply chain -- are in the best position to know the origin of the 3TG, and therefore Altra has structured its RCOI and due diligence processes to ultimately identify the applicable smelters of 3TG in Altra's supply chain.

Reasonable Country of Origin Inquiry

In order to comply with the Conflict Minerals Rule during the Reporting Period, Altra continued to utilize its Conflict Minerals compliance team, led by a member of Altra's senior management. Each of Altra's business units conducted a good faith reasonable country of origin inquiry ("RCOI") regarding 3TG in its supply chain. In accordance with the Conflict Minerals Rule and related guidance provided by the SEC, this RCOI was reasonably designed to determine whether any of the 3TG included in Altra's products originated in the Conflict Region and/or whether any of those 3TG may be from recycled or scrap sources. Due to the overlap between the supplier/smelter RCOI and the supplier/smelter due diligence processes, the supplier/smelter RCOI processes are summarized in the Due Diligence section of this Report.

Due Diligence

Altra designed its due diligence process to conform in all material respects with the Organization for Economic Cooperation and Development's ("OECD's") Due Diligence Guidance for

Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, an internationally recognized due diligence framework (the “OECD Framework”). In accordance with the OECD Framework, during the Reporting Period Altra has maintained a Conflict Minerals compliance and due diligence program that includes (i) the establishment of strong company management systems, (ii) procedures for identifying and assessing risk in Altra’s supply chain, (iii) a strategy to respond to identified risks, and (iv) public reporting on supply chain due diligence. The following is a summary of Altra’s efforts to comply with the OECD’s Five-Step Framework for Risk-Based Due Diligence in the Mineral Supply Chain.

1. Company Management Systems. Altra has established strong management systems in accordance with Step 1 of the OECD Framework. These systems include the following:
 - a. Altra has adopted and implemented a Policy Statement on Conflict Minerals which is publicly available in the “Governance” section of Altra’s website located at: <https://ir.altramotion.com/governance/governance-documents/>.
 - b. Altra has implemented an internal management structure to support supply chain due diligence. Altra’s management structure consists of (i) a member of Altra’s senior management with overall responsibility for the RCOI and due diligence processes, (ii) members of Altra’s Corporate Supply Chain Department with dedicated responsibility for the design of the RCOI and due diligence processes, and (iii) at least one employee at each of Altra’s business units who are responsible for executing the RCOI and due diligence processes at the business unit level. The business unit-level compliance teams are comprised of subject matter experts from relevant functions such as purchasing, quality assurance and engineering.
 - c. Altra continues to utilize a process to collect required supplier and smelter RCOI and due diligence data, as described below. In addition, Altra continues to require its suppliers to support its Conflict Minerals compliance efforts through contractual methods. For example, Altra has incorporated terms and conditions in its procurement documents which require the supplier to certify that its product is "conflict free."
 - d. Altra continues to engage with suppliers by communicating with and educating them as necessary with respect to the Conflict Minerals Rule.
 - e. Altra’s Code of Business Conduct includes a mechanism for employees to escalate issues and concerns regarding any compliance matter, including issues regarding compliance with the Conflict Minerals Rule. In addition, Altra’s Conflict Minerals business unit-level compliance teams routinely follow up with the management-level compliance team, including Altra’s Corporate Supply Chain and Legal Departments, to identify and escalate any identified issues associated with non-responsive or problematic responses to Altra’s RCOI survey. Altra believes that this system is conducive to identifying and addressing risks as early as possible.

2. Identify and Assess Risks in the Supply Chain. Altra has continued its efforts to increase its supply chain transparency and to identify and assess risks in its supply chain. As noted above, Altra designed its due diligence process to identify the smelters in Altra's supply chain in accordance with Step 2 of the OECD Framework. In particular, Altra's supplier due diligence process included the following:

- Due to the wide variety and high mix of products manufactured and sold by Altra, Altra conducted a hybrid risk-based approach to its RCOI and due diligence processes, with some of Altra's businesses targeting suppliers that, in the aggregate, were responsible for the top 80% of the businesses' total annual spending on materials, parts and components and other of Altra's businesses targeting suppliers that were known by the business with reasonable certainty to provide materials, parts or components that contain 3TG (each such supplier, an "In-Scope Supplier").
- Altra sent each In-Scope Supplier a copy of Altra's Policy Statement on Conflict Minerals.
- Altra requested that each In-Scope Supplier complete a survey regarding the presence and origin of 3TG contained within the components, parts and materials supplied to Altra during the Reporting Period.
- As necessary, Altra educated In-Scope Suppliers regarding the reasons for requesting the 3TG data and answered supplier questions related thereto.
- Altra followed up with In-Scope Suppliers that did not respond to Altra's initial outreach, and also followed up with In-Scope Suppliers who submitted data that appeared to be incomplete or incorrect.
- Altra amalgamated supplier-provided smelters into a single unique list of smelters.

Altra has relied on the responses of these In-Scope Suppliers to provide information about the source of 3TG contained within the parts, components and materials supplied to Altra. Some of Altra's In-Scope Suppliers were unable to identify the smelters or countries of origin in their supply chain, some In-Scope Suppliers responded by providing information related to all of the items the In-Scope Supplier produces without identifying smelters specific to the items purchased by Altra, and some In-Scope Suppliers included names of smelters that we believe may have been misidentified as smelters or that are not operational. As noted above, Altra made every reasonable effort to follow up with In-Scope Suppliers that (i) did not respond to Altra's initial outreach or (ii) submitted data that appeared to be incomplete or incorrect.

3. Design and Implement a Strategy to Respond to Risks. Altra has continued to develop and execute measures to respond to identified risks in accordance Step 3 of the OECD Framework. In particular, Altra's strategy includes the following:

- With respect to each smelter identified by Altra’s supply chain that declared directly or through their relevant industry association that they did not source from the Covered Countries, and were not recognized as conflict free by the RMI’s Responsible Minerals Assurance Process (“RMAP”), Altra, with the assistance of an outside consultant, reviewed publicly available information to determine if there was any contrary evidence to the smelter’s declaration.
 - With respect to each smelter identified by Altra’s supply chain that is sourcing from, or as to which there is reason to believe may be sourcing from, the Covered Countries, Altra did not audit such smelters but instead relied on the RMAP, and if the smelter has not been audited and recognized as conflict free by the RMAP, Altra conducted risk mitigation in accordance with the OECD Framework.
 - Altra’s compliance team consolidated the data provided by Altra’s In-Scope Suppliers, as well as the findings from Altra’s outside consultant, for periodic reporting to Altra’s senior management as needed, consistent with the OECD Framework.
 - Throughout the due diligence process, Altra identified the applicable risks associated with its supply chain for mitigation as discussed below under “Risk Mitigation Efforts”.
 - Altra communicates with and educates suppliers on compliance with the Conflict Minerals Rule as needed.
 - Altra communicates to its suppliers that they will be evaluated and reviewed on an ongoing basis for compliance with the Conflict Minerals Rule and that Altra reserves the right at any time to take appropriate actions with respect to non-compliant suppliers, up to and including discontinuing purchases from the supplier.
4. Independent Third Party Audit of Supply Chain Due Diligence. It is important to note that the OECD Framework was written for both upstream and downstream companies in the supply chain. With respect to Step 4 of the OECD Framework, as noted above, Altra is a downstream consumer of 3TG and is many steps removed from smelters and refiners who provide minerals and ore. Altra does not purchase raw or unrefined 3TG and does not, to the best of its knowledge, directly purchase these minerals from any of the Covered Countries. Therefore, Altra does not perform or direct audits of smelters and refiners within its supply chain. Altra relies on industry resources, such as the Conflict Free Smelters Initiative, RMAP and other certifying bodies, to provide certifications and to influence smelters and refiners to participate in audits and achieve conflict-free certifications.
5. Public Report on Supply Chain Due Diligence. Altra complies with Step 5 of the OECD Framework by making this Report and its Policy Statement on Conflict Minerals publicly

available in the “Governance” section of Altra’s website located at: <https://ir.altramotion.com/governance/governance-documents/>.

Results of Our RCOI and Due Diligence Processes

Altra’s efforts to collect information from In-Scope Suppliers continued into the current calendar year. Despite Altra’s diligent efforts in repeatedly contacting non-responsive suppliers, as of the date of this filing, Altra has yet to receive responses to its 3TG survey from a number of its In-Scope Suppliers. In addition, In-Scope Suppliers who have responded to Altra’s 3TG survey have showed varying degrees of cooperation. Some of the challenges Altra has faced with respect to obtaining and analyzing supplier responses include the following: (i) Altra is dependent on information received from its direct suppliers, who are dependent upon information received from their lower level suppliers, to determine (x) the country of origin of 3TG contained in the components and materials supplied to Altra and (y) which specific smelters are providing the source metals that eventually become incorporated into Altra’s products; (ii) Altra has a varied supplier base with differing levels of resources and sophistication, many of whom are not themselves subject to Rule 13p-1 of the Exchange Act; (iii) some of Altra’s In-Scope Suppliers provided incomplete or unclear responses that required significant follow-up; (iv) some of Altra’s In-Scope Suppliers were unable or unwilling to specify the country of origin of, or the smelters or refiners used for, materials and components supplied to Altra; and (v) the majority of Altra’s In-Scope Suppliers who did identify smelters or refiners in their supply chain responded to Altra’s 3TG survey at a company or divisional level and, therefore, Altra cannot definitively determine whether (x) any of the 3TG reported by these In-Scope Suppliers are actually contained in the products or components supplied to us or (y) whether the identified smelters or refiners are actually in our supply chain.

The responses provided by Altra’s In-Scope Suppliers resulted in the identification of 314 unique smelters that may have been the source of 3TG in products Altra manufactured or contracted to manufacture during the Reporting Period. These smelters are identified in Schedule A attached to this Report. With the assistance of its outside consultant, Altra determined that certain of these identified smelters source, or there is reason to believe may source, from the Covered Countries. Altra compared these smelters to the list of smelters that have been audited and recognized as conflict free by the RMAP and, for those smelters that have not been recognized as conflict free by the RMAP, Altra worked with its outside consultant to conduct risk mitigation in accordance with Step 3 of the OECD Framework, including performing additional due diligence to determine (i) whether the products supplied to Altra during the Reporting Period contain the particular 3TG sourced from such smelters, (ii) whether such smelters are part of Altra’s supply chain, and (iii) if there is any reason to believe such smelters directly or indirectly finance or benefit armed groups in the Covered Countries.

Notwithstanding the foregoing steps, due to the lack of product-level detail provided by Altra's In-Scope Suppliers, Altra was unable to confirm that the necessary 3TG in its products were processed by any particular smelter or smelters and is, therefore, unable to identify the processing facilities, country of origin or mine or location of origin of such 3TG.

Risk Mitigation Efforts

In the next compliance period, Altra intends to continue to make efforts to improve its RCOI and due diligence processes, in order to further mitigate any risk that the necessary 3TG in Altra's products could benefit armed groups in the Covered Countries. These efforts include:

- Continue to leverage the activities of the OECD and relevant trade associations to identify and improve best practices for RCOI and due diligence processes;
- Continue to educate members of our management and business unit-level conflict minerals compliance teams as well as other employees who are involved with 3TG on both the supplier and customer sides of Altra's business;
- Continue to engage with suppliers to improve the accuracy and completeness of the information provided to Altra about Altra's supply chain;
- Continue to move towards purchasing only from suppliers who are sourcing from certified, conflict-free smelters;
- Continue to compare the list of smelters identified as a result of Altra's RCOI and due diligence processes to the evolving list of smelters who have been designated as "conflict free" through independent "conflict free" smelter validation programs; and
- Continue to seek to include in supplier contracts a commitment by the supplier to take steps necessary to enable Altra to comply with the Conflict Minerals Rule.

In order to improve the transparency throughout its supply chain, Altra will routinely (i) monitor these risk mitigation efforts, (ii) report to senior management on the effectiveness of these efforts and (iii) make any adjustments to this strategy as may be necessary from time to time.

Independent Audit

In accordance with the Conflict Minerals Rule and related SEC guidance, an independent private sector audit of this Report is not required.

SCHEDULE A

The following smelters have been identified by Altra's suppliers as having potentially processed necessary 3TG in certain of Altra's products manufactured during the Reporting Period:

CID	Metal	Smelter Name	Country Location of Smelter
CID002763	Gold	8853 S.p.A.	Italy
CID002708	Gold	Abington Reldan Metals, LLC	United States
CID000015	Gold	Advanced Chemical Company	United States
CID003185	Gold	African Gold Refinery	Uganda
CID000019	Gold	Aida Chemical Industries Co., Ltd.	Japan
CID002560	Gold	Al Etihad Gold Refinery DMCC	United Arab Emirates
CID000035	Gold	Allgemeine Gold-und Silberscheideanstalt A.G.	Germany
