

**Carlisle Companies Incorporated**  
**Conflict Minerals Report**  
**For the Year Ended December 31, 2022**

This Conflict Minerals Report (the “Report”) of Carlisle Companies Incorporated (“Carlisle,” “the Company,” “we,” “us,” or “our”) has been prepared pursuant to Rule 13p-1 and Form SD (the “Rule”) promulgated under the Securities Exchange Act of 1934, as amended, for the year ended December 31, 2022. The Rule was adopted by the Securities and Exchange Commission (“SEC”) to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (“the Act”).

The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals which are necessary to the functionality or production of their products. For purposes of this assessment, conflict minerals are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are limited to tin, tantalum, tungsten, and gold (“Conflict Minerals” or “3TG”) and originated from the Democratic Republic of the Congo or an adjoining country (“Covered Countries”). These requirements apply to registrants whatever the geographic origin of the Conflict Minerals and whether or not they fund armed conflict. Please refer to the Rule for definitions of the terms used in this Report, unless otherwise defined herein. Please also note that the report presented herein is not audited.

### ***Company Overview***

Carlisle is a leading manufacturer and supplier of innovative building envelope products and solutions that enable greater energy efficiency in buildings. Through our family of leading brands in our building products businesses, we provide labor-reducing and environmentally responsible solutions to contractors and building owners with a keen focus on delivering the best-in-class Carlisle Experience to all channel partners. We are also a leading provider of products to the aerospace, medical technologies and general industrial markets. Carlisle is composed of the following segments:

- Carlisle Construction Materials (“CCM”);
- Carlisle Weatherproofing Technologies (“CWT”);
- Carlisle Interconnect Technologies (“CIT”); and
- Carlisle Fluid Technologies (“CFT”).

### ***Products Overview***

CCM is a diversified manufacturer and supplier of premium roofing products and related technologies primarily for the commercial construction market. CCM offers high-performance, single-ply roofing solutions that include ethylene propylene diene monomer (“EPDM”), thermoplastic polyolefin (“TPO”), polyvinyl chloride (“PVC”), architectural metal and roof garden systems. Key raw materials for this segment include methylene diphenyl diisocyanate (“MDI”), polyol, EPDM polymer, TPO polymer, carbon black and coated steel.

CWT is a leading provider of high-performance waterproofing and moisture protection products, protective roofing underlayments, integrated air/vapor barriers, spray polyurethane foam and coating systems, and block-molded expanded polystyrene insulation for the building envelope. Key raw materials for this segment include MDI, silicone polymer, asphalt, rubber, glass mat and expanded polystyrene insulation bead.

CIT designs and manufactures high-performance wire and cable, including optical fiber, for the commercial aerospace, military and defense electronics, medical device, industrial, and test and measurement markets. Key raw materials for this segment include gold, copper conductors that are plated with tin, nickel, or silver, polyimide tapes, polytetrafluoroethylene (“PTFE”) tapes, PTFE fine powder resin, thermoplastic resins, stainless steel, beryllium copper rod, machined metals, plastic parts, and various marking and identification materials. Key raw materials are typically sourced worldwide.

CFT designs, manufactures and sells highly-engineered liquid, powder, sealants and adhesives and high pressure foam equipment and integrated system solutions for spraying, pumping, mixing, metering and curing a variety of coatings used primarily in the automotive manufacture, general industrial, transportation, wood, protective coating, insulation, specialty and automotive refinishing markets. Key raw materials for this segment include carbon steel and various grades of stainless steel, brass, aluminum, copper, machined metals, carbide, machined plastic parts and PTFE. Key raw materials are typically sourced worldwide.

Based on a review of the key raw materials used by the segments and discussions with key operations personnel across all segments, the Company determined that all four Conflict Minerals are present and that the CIT segment has the highest utilization of 3TG. It has been determined that CFT has significantly less utilization of 3TG than CIT, and that CCM and CWT do not use materials in the manufacturing process that contain Conflict Minerals. For the year ended December 31, 2022, the Company's reasonable country of origin inquiry ("RCOI") and due diligence inquiries focused primarily on CIT and CFT.

### ***Conflict Minerals Policy***

The Company has adopted a Conflict Minerals Policy, which is publicly available on our website at [www.carlisle.com](http://www.carlisle.com) under "Corporate Governance".

### ***Reasonable Country of Origin Inquiries***

The Company completed a detailed scoping exercise, led by key operating and purchasing personnel, including reviewing all purchases over a 12-month period to identify any 3TG and corresponding suppliers. The suppliers were sorted according to their likelihood of supplying components or materials containing Conflict Minerals. Those that were known to or could potentially supply components or materials containing Conflict Minerals with whom annual spend exceeded a specified threshold were considered to be in scope for supplier inquiries.

As a result of this scoping process, 656 different suppliers were identified for RCOI outreach.

We conducted a RCOI reasonably designed to determine whether the 3TG in our products in the 2022 Report Year originated from the Covered Countries or are from recycled or scrap sources in accordance with the requirements of the Rule. The Covered Countries are the Democratic Republic of Congo and its adjoining countries (Angola, Burundi, Central African Republic, Rwanda, South Sudan, Tanzania, Uganda and Zambia). As part of its RCOI, and with the assistance of a third-party consultant, Assent Compliance, Inc. ("Assent"), the Company engaged its potential 3TG suppliers to collect information regarding the presence and sourcing of 3TG in its products. Suppliers were asked to complete and submit, within a certain time frame, the RBA-GeSI Conflict Minerals Reporting Template ("CMRT") version 6.22. The CMRT is a standardized reporting template developed by the Responsible Minerals Initiative ("RMI") that requests, among other things, information regarding country of origin of 3TG supplied to the Company and the smelters or refiners ("SOR") in the supply chain. Assent followed up with all unresponsive suppliers through a defined process through both automated emails and one-on-one emails, including offering assistance and further information to suppliers about the requirements of the Rule and the Company's expectations.

Because of the size, complexity of our products, and the depth, breadth, and constant evolution of our supply chain, it is challenging to identify providers upstream from our direct suppliers. There are potentially many tiers of suppliers and sub-suppliers between the Company and the SORs that process the 3TG that is contained in each product manufactured or contracted to be manufactured by Carlisle. Therefore, it is inherently difficult to determine the ultimate source of 3TGs in our products.

Based on the responses received thus far from direct suppliers, there is reason to believe that some of the necessary Conflict Minerals used in our products may have originated from the Covered Countries, but no instances were identified in which this sourcing, directly or indirectly, financed or benefited armed groups from the Covered Countries. However, since not all supplier responses have been received and not all additional inquiries have been completed, we are unable to determine the country of origin of some Conflict Minerals or whether they originated from recycled or scrap sources. We continue to reach out to unresponsive suppliers and perform additional inquiries until such time we have 100% response rate.

As a result of the above conclusion and pursuant to the Rule, we undertook due diligence measures on the source and chain of custody of the necessary Conflict Minerals in our products which we had reason to believe may have originated from Covered Countries and which may not have come from recycled scrap or scrap sources. There is significant overlap between our RCOI efforts and our due diligence measures performed.

## Due Diligence Performed

Carlisle undertook systematic due diligence to determine the status of the Conflict Minerals used in its businesses. Due diligence efforts have been designed to conform, in all material respects, with the framework presented by The Organization for Economic Co-operation and Development ("OECD") in the publication *OECD (2016), OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Third Edition*, OECD Publishing, Paris (<http://dx.doi.org/10.1787/9789264252479-en>) and the related Supplements for gold and for tin, tantalum and tungsten, an internationally recognized due diligence framework. The OECD Due Diligence Guidance includes the following five-step program:

- Step 1: Establish strong company management systems
- Step 2: Identify and assess risks in the supply chain
- Step 3: Design and implement a strategy to respond to identified risks
- Step 4: Carry out independent third-party audit of smelter/refiner's due diligence practices
- Step 5: Report annually on supply chain due diligence

### Establish Strong Company Management Systems

- **Conflict Minerals Policy:** As noted above, the Company has adopted and maintains a Conflict Minerals Policy related to our sourcing of 3TG. The policy has been provided to our suppliers and is publicly available on our company website.
- **Internal Team and Training:** The Conflict Minerals team responsible for overseeing Carlisle's compliance is composed of our General Counsel and our CIT Director of Supplier Development along with designated representatives within the supply chain organizations at each segment. Additionally, a professional services firm was engaged to augment the internal management group responsible for the design and implementation of our planned due diligence.
- **Control Systems:** A management system has been established to support supply chain due diligence related to 3TG. We employ a supply chain system of controls and transparency through the use of due diligence tools, such as the CMRT used to identify the smelters and refiners that process the necessary Conflict Minerals contained in a company's products and the country of origin of those Conflict Minerals.
- **Supplier Engagement:** We have feature requirements related to Conflict Minerals in our standard template for significant supplier contracts and specifications so that current and future suppliers are obligated to comply with our policies on Conflict Minerals, including participation in a supply chain survey and related due diligence activities.
- **Grievance Mechanism:** In the event of an actual or possible violation of our policies, including the Company's Conflict Minerals Policy, employees (internal) and suppliers (external) can report violations as part of the Company's protocol for reporting suspected violations of the Carlisle Code of Business Conduct and Ethics. The Company's Code of Business Conduct and Ethics is available on our website at [www.carlisle.com](http://www.carlisle.com) under "Corporate Governance".
- **Records Maintenance:** We employ a database to assess due diligence information and maintain records related to our conflict mineral program, in accordance with our record retention policies.

### Identify and Assess Risks in the Supply Chain

Tracing materials back to their mine of origin is a complex aspect of responsible sourcing in our supply chain. We have determined that seeking information about 3TG SORs in our supply chain represents the most reasonable effort we can make to determine the mines or locations of origin of the 3TG in our supply chain.

Our primary means of determining origin of our 3TG for the 2022 Report Year was by conducting a supply chain survey with direct suppliers using the CMRT. This supply chain survey, and Carlisle's Conflict Minerals program as a whole, has been developed and implemented in cooperation with Assent.

Assent provided each supplier a copy of the CMRT to complete for purposes of Conflict Minerals tracking. Assent followed up with all unresponsive suppliers through a defined process through both automated emails and one-on-one emails. The software platform automatically reviewed the responses against criteria developed to determine which required further engagement with our suppliers. These criteria included incomplete responses as well as inconsistencies within the data reported in the CMRT. Assent worked directly with those suppliers to provide revised responses.

Once surveys were returned, Assent reviewed and attempted to match each verified SOR identified in the completed surveys to available lists of SORs that have been validated as conflict free under internationally-recognized schemes such as the RMI Responsible Minerals Assurance Process ("RMAP"). If a SOR was not validated by the RMI's RMAP, Assent either attempted to contact the SOR to gather more information about its sourcing practices or conducted research to determine whether there are any additional publicly available sources of information regarding the SORs' sourcing practices.

In accordance with OECD Guidelines, it is important to understand risk levels associated with Conflict Minerals in the supply chain. Smelters not being certified DRC-Conflict Free pose a significant risk to the Supply Chain. Each facility that meets the RMI definition of a smelter or refiner of a 3TG mineral is assigned a risk of high, medium or low based on five scoring criteria:

- Geographic proximity to the DRC and covered countries;
- RMAP audit status;
- Known or plausible evidence of unethical or conflict sourcing;
- Known mineral source country of origin; and
- Peer assessments conducted by credible third-party sources.

If a risk is identified, risk mitigation activities are initiated. As per the OECD Due Diligence Guidance, risk mitigation will depend on the supplier's specific context. Suppliers are given clear performance objectives within reasonable timeframes with the goal of progressive elimination of these risks from the supply chain.

In addition, suppliers are guided to the Assent University learning platform to engage in educational materials on mitigating the risk of smelters or refiners on the supply chain.

#### Design and Implement a Strategy to Respond to Identified Risks

The Company maintains a risk management plan to respond to risks identified in the above-described risk assessment. The Company's Conflict Minerals program is implemented, managed and monitored in accordance with this risk management plan.

The Company's Conflict Minerals team provides updates to senior management of the Company in connection with the Conflict Minerals program, including with regard to risk assessment and results of the annual due diligence process.

As described in our Conflict Minerals Policy, we expect our suppliers to fully support our compliance efforts, including in connection with our due diligence efforts to trace the source and chain of custody of our 3TG. As part of our risk management plan, to ensure suppliers understand our expectations, we worked with Assent to provide documented instructions to suppliers and answered all inquiries that needed further clarification. We will continue improving our Conflict Minerals process to obtain complete and accurate information about SORs.

#### Support Independent Third-Party Audits of Supply Chain

The Company does not typically have a direct relationship with 3TG smelters and refiners. Therefore, we rely on the RMI's RMAP to manage and report results of the independent third-party audits of smelters and the related certification.

#### Carry Out Independent Third-Party Audit of Smelter/Refiner's Due Diligence Practices

While we currently do not engage an independent third-party audit of smelters/refiners identified in our supply chain, we support the auditing efforts of the RMI.

## ***Results of Due Diligence***

As a result of the due diligence efforts described above, we received responses from 87.35%, or 573, of our direct suppliers for the year ended December 31, 2022. Of these, 549 were completed and validated CMRTs. From these responses, a list was compiled of the smelters and refiners that may have been used to process 3TGs necessary to the functionality or production of our products. For all smelters identified, Assent confirmed that the name was listed on the RMI's Standard Smelter List. We have validated 343 smelters to date and continue to work on validating the additional entries from submitted CMRTs. Based on the smelter lists provided by suppliers via the CMRTs and publicly available information regarding the results of sourcing audits by the RMI, we have identified 222 Conflict-Free SORs, with an additional 7 that are active in the audit process (See Appendix A).

The information that we received from a majority of our direct suppliers was at a company-wide level. Therefore, the smelters identified by our direct suppliers may include facilities that processed 3TGs that our direct suppliers supplied to their other customers rather than to us. Thus, we are unable to conclusively determine whether these smelters were used to process the 3TGs necessary to the functionality or production of our products during 2022. Because of this uncertainty, we are also unable to conclusively determine the country of origin of 3TGs in our products during 2022, and therefore, are unable to conclusively determine the source and chain of custody of those 3TGs. In addition, the third-party audits conducted by the RMI, and the information that we receive from our direct suppliers may yield inaccurate or incomplete information. For example, the information received from our direct suppliers may be incomplete because they may not have received accurate and complete Conflict Minerals information from all of the suppliers in their own supply chain. We also do not have access to audit reports or detailed findings of the third-party audits conducted as part of the RMI RMAP and, as a result, are not responsible for the quality of these audits or the audit findings.

## ***Due Diligence Procedures to be Performed***

Carlisle will continue to implement steps to improve the information gathered from its due diligence to further mitigate the risk that its necessary Conflict Minerals benefit armed groups. We will continue to work to increase the response rate of suppliers and will continue to evaluate responses to the surveys with the expectation that the third-party developed software will continue to help increase efficiency and identify any necessary follow-up procedures. This includes executives and supply chain management teams completing a supplier scoping exercise, sending CMRTs to any supplier selling goods to Carlisle that may contain 3TG minerals, detailed analysis of all survey responses, and additional inquiries as necessary.

## Appendix A

### Summary of Smelter and Refiner Status

The table below details, as of December 31, 2022, the status of operational smelter and refiner facilities, identified by the surveyed suppliers, and the results of our smelter and refiner due diligence activities. The table indicates the number of such smelters and refiner facilities that:

- have received a "conflict-free" designation from an independent third-party audit program (referred to as "Conformant");
- have begun participating in an independent third-party audit program (referred to as "Active");
- have received a "non-conformant" designation from an independent third-party audit program (referred to as "Non-Conformant"); or
- have not begun participating in an independent third-party audit program (referred to as "Not Enrolled").
