

CyberArk's Privileged Identity Management Suite Wins SC Magazine Award

April 25, 2012 4:58 PM ET

Suite Named Best IAM Solution and Is Highly Commended in the Information Security Product of the Year Category

NEWTON, Mass. and LONDON - April 25, 2012 - CyberArk® Software today announced that its Privileged Identity Management Suite was named Best Identity Access Management (IAM) solution, and was Highly Commended in the Information Security Product of the Year category, at the SC Magazine Europe 2012 awards ceremony last night.

CyberArk's Privileged Identity Management Suite picked up the award for Best Identity Access Management solution in recognition of the solution's feature-rich capabilities. Fending off competition from three other vendors, the judges were particularly impressed with the solution's central point of control that enables organizations to achieve security, streamline updates with enhanced workflows, and ensure compliance with regulations and policies.

"We are extremely honored to have been recognized for our solution and innovative technology by the judges of the SC Magazine Awards Europe," said Udi Mokady, president and CEO of CyberArk Software. "CyberArk has always been at the forefront of this space, delivering cutting edge solutions that help our customers address key security challenges. We look forward to continuing to build on this success over the months and years to come."

Held annually, the SC Awards honor professionals working to secure enterprises, and the vendor and channel communities that deliver innovative security technologies. Judged by senior members of the information security profession, the awards - which this year attracted a record number of entries - are widely established as a benchmark of success in the industry.
