CyberArk's First Asia-Pacific Customer and Partner Event Reflects Strong Regional Momentum

January 25, 2012 11:42 AM ET

Attendees Gained Insight Into Emerging IT Security Risks in the Data Center and Best Practices for Protecting Against Targeted Attacks Using Privileged Account Management Solutions

NEWTON, Mass. - January 25, 2012 -CyberArk® Software, a leading global information security provider for protecting and managing privileged accounts and sessions, critical applications and sensitive information, today shared details from its first Asia-Pacific Customer and Partner Event. The event drew participants from more than 13 countries who benefitted from learning how the adoption of advanced Privileged Identity Management and Sensitive Information Management technologies can provide the foundation for a comprehensive, preventative IT security infrastructure that supports business flexibility and compliance.

CyberArk achieved impressive growth in the Asia-Pacific over the past year, fueling strong interest in an event of this scope. The company reported a more than 50 percent increase in revenues and the addition of 30 customers across multiple vertical market sectors in this region including financial services, banking, insurance, telecommunications and government.

â€œThis event was timely, and given the current threat landscape it will certainly become an event Iâ€™ll look forward to attending in the future,â€said Joel A. Geronimo, head, information security architecture and engineering department, information security division, Globe Telecom, Inc. â€œIt was important for our team to learn more about how we can maximize the benefits of CyberArk solutions for security and compliance purposes, and to preview upcoming technology enhancements and roadmap. Equally of value was the opportunity to network with peers in the security community, share our experiences, and learn from their knowledge in order to help influence and refine our own best practices.â€

Attendees gained insight into CyberArkâ€™s technology development roadmap and benefitted from customer presentations and product demonstrations along with in-depth technical roundtables and security and risk management sessions. Participants showed strong interest in CyberArkâ€™s Privileged Session Management Suite, a single solution that protects databases, virtual environments and servers from insider and advanced external threats, and On-Demand Privileges Managerâ„¢ that enables users to control and monitor the commands superusers can run based on their role and current task.

â€œCyberArk has built a strong customer and partner ecosystem in Asia-Pacific where adoption of our comprehensive, proven solutions for privileged account management and sensitive information sharing is playing an increasingly important role in organizationsâ€™ proactive cyber security strategies,â€ said Dan Dinnar, vice president sales, Asia-Pacific, CyberArk Software. â€œThe event was a valuable opportunity to bring this group together in a setting where they can learn from common experiences, and return to their respective organizations with strategies that can be realistically implemented, in both the near- and long-term.â€

Popular sessions featured detailed discussions on cyber security and proactively addressing Advanced Persistent Threats (APTs); examining virtualized data center risks; instruction on how to continuously isolate, control and monitor privileged sessions; and securely accelerating business with an integrated Managed File Transfer platform.
â€œCyberArk has held similar customer events in the U.S. and EMEA for the past several years, and with great success,â€said Udi Mokady, CEO, CyberArk Software. â€œWe are proud of the growing interest and participation from our Asia-Pacific customers who acknowledge CyberArk as the best solution in the market from both a technology and preventative security perspective.â€

About CyberArk

CyberArkÂ® Software is a global information security company that specializes in protecting and managing privileged users, sessions, applications and sensitive information to improve compliance, productivity and protect organizations against insider threats and advanced external threats. With its award-winning Privileged Identity Management, Sensitive Information Management and Privileged Session Management Suites, organizations can more effectively manage and govern data center access and activities, whether on-premise, off-premise or in the cloud, while demonstrating returns on security investments. CyberArk works with nearly 1000 customers, including more than 35 percent of the Fortune 100. Headquartered in Newton, Mass., CyberArk has offices and authorized partners in North America, Europe and Asia Pacific. For more information, please visit www.cyberark.com.
