Cautionary Statement Regarding Forward-Looking Statements

This presentation contains “forward-looking statements” for purposes of the federal securities laws. All statements, other than statements of historical fact included in this presentation, regarding our strategy, future operations, financial position, estimated revenues and losses, projected costs, prospects, plans and objectives of management are forward-looking statements. When used in this presentation, the words “could,” “believe,” “anticipate,” “intend,” “estimate,” “expect,” “project” and similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain such identifying words. These forward-looking statements are based on our current expectations and assumptions about future events and are based on currently available information as to the outcome and timing of future events.

We caution you that these forward-looking statements are subject to numerous risks and uncertainties, most of which are difficult to predict and many of which are beyond our control. These risks include, but are not limited to, commodity price volatility, inflation, lack of availability of drilling and production equipment and services, environmental risks, drilling and other operating risks, regulatory changes, the uncertainty inherent in estimating reserves and in projecting future rates of production, cash flow and access to capital, the timing of development expenditures, potential adverse reactions or changes to business or employee relationships resulting from the business combination between Talos Energy LLC and Stone Energy Corporation, competitive responses to such business combination, the possibility that the anticipated benefits of such business combination are not realized when expected or at all, including as a result of the impact of, or problems arising from, the integration of the two companies, litigation relating to the business combination, and other factors that may affect our future results and business, generally, including those discussed under the heading “Risk Factors” in our final consent solicitation statement/prospectus, dated April 9, 2018, filed with the Securities and Exchange Commission pursuant to Rule 424(b)(3) under the Securities Act of 1933, as amended.

Reserve engineering is a process of estimating underground accumulations of oil, natural gas and NGLs that cannot be measured in an exact way. The accuracy of any reserve estimate depends on the quality of available data, the interpretation of such data and price and cost assumptions made by reserve engineers. In addition, the results of drilling, testing and production activities may justify revisions of estimates that were made previously. If significant, such revisions would change the schedule of any further production and development drilling. Accordingly, reserve estimates may differ significantly from the quantities of oil, natural gas and NGLs that are ultimately recovered.

Should one or more of these risks occur, or should underlying assumptions prove incorrect, our actual results and plans could differ materially from those expressed in any forward-looking statements. All forward-looking statements, expressed or implied, are expressly qualified in their entirety by this cautionary statement. This cautionary statement should also be considered in connection with any subsequent written or oral forward-looking statements that we or persons acting on our behalf may issue. Except as otherwise required by applicable law, we disclaim any duty to update any forward-looking statements, to reflect events or circumstances after the date of this presentation.

[We have provided internally generated reserve estimates in this presentation that have not been audited by our third party reserve engineer.] In addition, this presentation includes a summation of our pro forma proved and probable reserves. Investors should be cautioned that estimates of probable reserves are more uncertain than proved reserves, but have not been adjusted for risk due to that uncertainty. Therefore, estimates of proved and probable reserves are not comparable and their summation may be of limited use. This presentation has been revised from the initial version posted to investors. For additional information, see our Current Report on Form 8-K filed on June 1, 2018.

Use of Non-GAAP Financial Measures

This presentation includes the use of EBITDA, EBITDA Margin, Adjusted EBITDA and PV-10, which are financial measures not calculated in accordance with generally accepted accounting principles (“GAAP”). Please refer to the appendix for a reconciliation of the appropriate financial measures to their most directly comparable GAAP measures.

We believe the presentation of EBITDA, EBITDA Margin and EBITDAX are important to provide management and investors with [i] additional information to evaluate items required or permitted in calculating covenant compliance under our debt agreements, (ii) important supplemental indicators of the operational performance of our business, (iii) additional criteria for evaluating our performance relative to our peers and (iv) supplemental information to investors about certain material non-cash and/or other items that may not continue at the same level in the future. EBITDA, EBITDA Margin and EBITDAX have limitations as analytical tools and should not be considered in isolation or as substitutes for analysis of our results as reported under GAAP or as an alternative to net income (loss), operating income (loss) or any other measure of financial performance presented in accordance with GAAP.

PV-10 is a non-GAAP financial measure used by management, investors and analysts to estimate the present value, discounted at 10% per annum, of the estimated future cash flows of our estimated proved and probable reserves before income tax and derivatives. Management believes that PV-10 provides useful information to investors because it is widely used by professional analysts and sophisticated investors in evaluating oil and natural gas companies. Because there are many unique factors that can impact an individual company when estimating the amount of future income taxes to be paid, we believe the use of a pre-tax measure is valuable for evaluating us. PV-10 should not be considered as an alternative to the standardized measure of discounted future net cash flows as computed under GAAP. Since Talos does not expect to pay any income taxes in the foreseeable future, the PV-10 numbers shown are expected to be the same as the standardized measure.
**Leadership Team**

*Highly experienced Management Team, with a significant track record of creating superior returns for investors*

- Key executives have worked together since 2000 and provided attractive returns to investors through multiple commodity downturns:
  - Sold Gryphon Exploration for a ~3.0x equity return
  - Sold Phoenix Exploration for a ~2.0x equity return
- Allocated billions of capital across Gulf of Mexico wells and M&A transactions
- Best-in-class Operations and HSE culture
Long Term Value Creation

Talos Energy represents an opportunity to invest in a positive free cash flow generating business in an underinvested basin, with a basin-leading management team with a best-in-class track record of delivering value to investors.

Value Creation Over Time

- **Near Term**
  - Offshore conventional oil company focused on corporate returns and NAV growth through the drill-bit
  - Largest public pure-play offshore oil company in the GoM with estimated average daily production in 2018 between 49 – 53 Mboe/d
  - Strong balance sheet and liquidity with Net Debt / 2017 PF EBITDA of 1.3x and $350 - $450mm of liquidity
  - Management team with track record of value creation through the cycle

- **Medium Term**
  - Talos Energy is the logical pure-play GoM consolidator
  - Continue to organically develop the US Gulf of Mexico portfolio
  - Majors monetizing high quality assets in the US Gulf of Mexico
  - A number of smaller players and privates looking for near-term US GoM exit

- **Long Term**
  - Operator of historic Zama discovery which was the first private offshore exploration well in Mexico's history
  - Initial gross original oil in place estimates of ~1.4 – 2.0 billion barrels, appraisal in 2019
  - Additional prospects on ~160,000 acre position
  - Discoveries being sold by capital constrained large caps
  - Lease sale both in the US and Mexico provide for additional opportunities to continue to grow Talos’ resource base organically

**Talos consistently sells its crude oil production in premium markets**

**WTI Differentials**

- Compared to the Permian basin and other onshore premium basins, the Gulf of Mexico tends to afford a much more robust pricing market.
- Talos Energy’s production is sold consistently into established infrastructure that receives premium pricing to WTI.
- Aggregate average realized oil price before hedging in 2017 tracked WTI closely.

Top-Tier Economics in the Deepwater GoM

GoM Project Economics Comparable to US Shale Oil

Key changes and reasons

- Exploration and development focused on leveraging existing infrastructure
- Better drilling and completion efficiencies, similar to onshore basins
- Lower rig rates, with a cost of goods and services market that increases at a lower rate than other onshore basins

Recent industry commentary

“RSEG has determined, breakevens in the GOM midwater are lower than the Permian. That’s right, with costs plummeting since 2015 we estimate that breakevens are around $25/boe.”

“… I would expect capital to start flowing back to the mid and deepwater assets shortly.”

Andrew Gillick – RS Energy - May 14, 2018

Source: Wood Mackenzie, RS Energy Group
Deepwater Project Economics

**Key Notes**

- Deepwater project economics are still compelling even in a lower commodity price environment
- Low risk opportunities available in the GOM market to participate in short tie-back opportunities with +10 MMBO of potential
- Talos is constantly high grading its portfolio to bring forward the most compelling internally and externally generated projects
- Economics are *inclusive* of P&A costs

---

**Other Economic Assumptions**

- Using a Pₕ assumption of 67% based on 50-80% Pₕ range
- Cost to Drill, Case and Complete: $85 MM
- Third party PHA fees: $500k/mo. LOE plus $4.50/bbl and $0.55/mcf
- Gas price held flat at $3.00/MMBtu
- No shrinkage applied
- No value for NGLs assumed

---

**ENSCO 8503 on In-Field Phoenix Well**

---

**Risked Deepwater Project IRR’s at $50 → $70/bbl**

- **Un-risked Success Case**
- **Price Sensitivity $50 → $70**

---

**In-Field Well (0-5 mi.)**
- $20 MM subsea hook-up
- 12 months to 1st oil
- 8,000 BOPD IP
- Minimal expenses

**Short Tie-Back (5-10 mi.)**
- $50 MM subsea hook-up
- 18 months to 1st oil
- 10,000 BOPD IP
- Third-party PHA terms

**Long Tie-Back (10-30 mi.)**
- $150 MM subsea hook-up
- 24 months to 1st oil
- 15,000 BOPD IP
- Third-party PHA terms
Green Canyon Phoenix Complex (Typhoon, Boris, Tornado)

Key Notes

- Since acquiring the Phoenix field, Talos has materially grown production and reserves in the asset.
- New seismic and reprocessing led to a material deeper pool discovery in Tornado which is currently producing over 25,000 BOE/d gross from two wells (~35,000 BOE/d total field production).
- Extensive inventory of development and exploration wells will allow us to continue increasing field production over the next few years.
- Our goal is to fill-up the capacity of the production facility, the Helix Producer 1 (HP-1).
- Talos is the operator of the Phoenix complex and has a 100% W.I. in the field and a 65% W.I. in all Tornado wells.

Reprocessed Seismic to Improve Imaging

- Amp./Structure Map - Tornado
  - NAZ Data (Original operator data)
  - Reprocessed WAZ Data (Talos data)
Deepwater Development Project - Tornado 3

Arbitrary Seismic Line Along Tornado 3 Drill Path

Key Notes

- While drilling Tornado 2, Talos made a discovery in the downthrown fault block before sidetracking the well for a completion in the main fault block (Tornado #2 ST)

- The discovered resource was booked at YE17 and is known as Tornado 3 “Downthrown PUD”

- Currently plan to drill Tornado 3 by early 2019 with first production expected early second quarter 2019

- Expected rate of 10-15 MBOE/day gross

Tornado 3 Economics
- Drill, Comp., H/U: $110MM
- Initial Rate: 10-15 MBOE/d
  @ $55/bbl & $3.00/mcf
  ✓ ROI > 3.0
  ✓ IRR > 90%

B6 Amplitude/Structure Map

GC 281 #002 ST01 (Tornado 2 ST – PDP)

Tornado 3 (PROPOSED PUD)

GC 281 #002 (Downthrown Discovery)
Key Notes

- Key assets in the northern Mississippi Canyon corridor
- 7 additional prospects identified
- Talos will continue to mature and execute nearby drilling potential like the recent Mt. Providence success
- Additional opportunity for PHA income, as one of the major hubs in the area
- Field proximity creates operational synergies
Mt. Providence Development Well Success

Key Notes

- Drilled the Mt. Providence MC 28 #004 well safely and on budget
- Logged full to base oil pay with a total net thickness similar to pre-drill expectation
- Pressures confirmed pre-drill model of a well connected, oil-rich system
- Updating the next generation reservoir model to evaluate the follow-up Mt. Hunter location
- Well completion in early 3Q and expecting first oil by September 2018, with 2-4 MBOE/d gross initial rate

Mt. Providence Economics

- Drill, Comp., H/U: $52MM
- Initial Rate: 2-4 MBOE/d

@ $55/bbl & $3.00/mcf

- ROI > 6.0
- IRR > 65%

Seismic Data Courtesy of TGS
Offshore Mexico

Strategic Context

- Mature offshore basin with significant production
- Single operator was historically tasked with discovering and developing everything for more than 75 years
- Lower Pliocene through Miocene reservoirs with seismic attributes similar to the US Gulf of Mexico
- Shallow water depth decreases development costs and shortens cycle time to first oil
- Close proximity to the US Gulf of Mexico

Macro View

- Talos was the first foreign operator to enter offshore Mexico in Round 1.1 after winning the only two competitive blocks in that sale (July 2015)
- Offshore Mexico is now one of the hottest exploration basins in the world and has attracted global competition
- Wood Mackenzie predicts that Round 1 of the energy reform will deliver a third of Mexico’s production by 2024
- Talos’ Zama discovery predicted to contribute nearly 10% of the country’s oil production by 2024

Source: Wood Mackenzie
Mexico – Bid and Lease Progression

After Round 1.1 - July 2015

- Two blocks awarded
- One small, private operator prevailed in the only two competitive blocks (Talos Energy)
- Limited IOC participation
- “Round One in Mexico Disappoints” - Oil and Gas Investor (July 2015)

Key Operators
- Pemex
- Talos

After Round 3.1 - March 2018

- 41 offshore blocks awarded to date
- 39 different operators now in Mexico
- Significant IOC and independent operator participation
- Shell now has significantly more acreage in offshore Mexico than offshore US GOM

Key Operators
- Exxon
- Shell
- Chevron
- BP
- Total
- ENI
- Statoil
- Lukoil
- Petronas
- Pemex
- Repsol
- Murphy
- Pan American
- DEA
- Cairn
- Newpek
- Fieldwood
- Talos

As a first-mover in offshore Mexico, Talos secured significant acreage ahead of the global competition and has since announced a globally recognized discovery in Zama.
1. Talos Operator, Working Interest = 35%
2. Encountered >1,100’ gross pay section and MDT gradient shows one connected hydrocarbon column with an oil gradient
3. OOIP estimated at 1.4 – 2.0 BBOE / EUR of 400-800 MMBOE\(^1\)
4. 30° API Gravity oil
5. High quality rock properties similar to upper Miocene in the U.S. Gulf of Mexico

\(^1\) Inclusive of the volume on neighboring block

Zama Comparison to Appomattox

Appomattox Development (US Deepwater GoM)

Discovery Overview

- Discovered 530 ft gross/425 ft net oil pay (Dec 2009)
- 650 MMBOE of Discovered Resource
- Peak Est. Production of 175 MBOE/d
- Semi-submersible host
- 6 subsea drill centers
- Reservoir at ~25,000’ TVD

Research Report – Wood Mackenzie

- Turnaround to first oil: 10 years
- Estimated full-cycle CAPEX of ~$9.2 bil.
- Breakeven price of $26.70/bbl
- Pre-tax IRR of 26%

Zama Development (Offshore Mexico)

Discovery Overview

- Discovered 1,100 ft gross/655 net oil pay (Jul 2017)
- 400-800 MMBOE of Discovered Resource
- Peak Est. Production of 150 MBOE/d
- 3 fixed-leg production facilities
- Dry wellheads with platform rigs
- Reservoir at ~11,000’ TVD with seismic DHI’s

Research Report – Wood Mackenzie

- Turnaround to first oil: 5 years
- Estimated full-cycle CAPEX of ~$1.8 bil.
- Breakeven price of $19.46/bbl
- Pre-tax IRR of 69%

Key Notes

- Talos plans to begin appraisal program for the Zama Discovery by 4Q18 / 1Q19
- FID expected by early 2020 after drilling and evaluating the rock and fluid data from three additional wells, as well as conducting a FEED study
- The current plan is to develop Zama with three production platforms across the structure with first oil estimated by 2022
- Field will continue to be developed through 2024, when Platform C is expected to be installed
## 2018 Pro Forma Full Year Guidance\(^{(1)}\) and 2019 Outlook

<tr>
<td>G&amp;A(^{(2)})</td>
<td>$57 – $62</td>
</tr>
<tr>
<td>Capital Expenditures</td>
<td>$430 – $450</td>
</tr>
</tbody>
</table>

### 2018 Capital Breakdown

- **Mexico Exploration**: 1%
- **Mexico Appraisal**: 4%
- **US Drilling and Completion**: 44%
- **P&A**: 26%
- **G&G/Land/Cap G&A**: 14%
- **Asset Management**: 11%

### 2019 Outlook - Production

- Tornado #3 well scheduled to spud in 4Q 2018 and expected to start production in 2Q 2019 with estimated IP in the 10-15 mboe/d range, on a gross basis
- Mt. Providence expected to be completed and brought to production in 3Q 2018 (IP rate of 2-4 mboe/d) – full year of production in 2019
- First oil on Boris #3 expected in 2Q 2019 with an IP rate of 3-5 mboe/d
- Continue the Asset Management program, which plays a significant role in offsetting natural production declines
- Phoenix/Tornado fields are scheduled to be shut-in in 1Q 2019 for 45 – 60 days due to HP-1 thrusters replacement Dry-Dock. The estimated impact on the annual average daily production is between 2 – 3 mboe/d net to Talos’ interest

### 2019 Outlook – Capital Expenditures

- Total Capex in 2019 is expected to remain at the same levels of what is expected in 2018
- 2018 P&A requirements are not indicative of go-forward expectations; we expect P&A to decline to 18% of total capex in 2019 and down to 15% by 2021 as our long-term run rate expectation
- Appraisal of the Zama field offshore Mexico will be intensified
- Drill and complete Tornado #3
- Plan to drill and complete Boris #3, drill 1-3 exploration wells in Mexico, participate in two additional non-operated deepwater exploration wells, and drill 5-7 shelf wells.
- Continue to dedicate capital to Asset Management, as it defers P&A costs and offsets production declines

**Notes:**

1- Pro forma effect to the combination of Talos and Stone Energy on May 10, 2018, as if it had occurred on January 1, 2018; also includes pro forma effect of Ram Powell’s acquisition by Stone Energy from May 1, 2018 onwards. For the expected Financial Reporting basis of our 2018 Guidance, please refer to the Appendix

2- Excludes transaction and merger integration related costs
**Net Asset Value**\(^{(1)(2)}\)

_Talos Energy trades significantly below its peer group on a NAV basis \(^{(3)}\)_

---

1. 2P Core NAV PV-10 presented at 5/3/18 Strip Pricing: 2018: $67.19/$2.79, 2019: $62.02/$2.71, 2020: $56.86/$2.70, 2021 onwards: $65.00/$3.00
2. 1P and 2P NAVs inclusive of Ram Powell and are net of future P&A obligations
3. Please see next page for peer group analysis
4. Resource ranges are based on geologically risked (low end of range) and unrisked (high end of range) views of each project net to Talos Energy's interest; Mexico potential shown at WI barrels
Talos Trades at a Discount to Peers on Net Asset Value

Key Notes

- Talos based on 2P volumes
- Peer group from consensus NAV, which may include more than just 2P volumes
- Talos clearly trades at a steep discount to peers and has a significant running room from a value perspective

Sources: Talos and Factset. Market data as of 5/15/2018

Note:
1. Intl Offshore Peers include KOS, MUR, TLW-GB, OPHR-GB, PMO-GB and WTI. Large Cap includes APC, HES and MRO. Mid-Cap includes CRZO, EPE, SM and WPX. Permian includes AREX, CDEV, CPE, CXO, EGN, FANG, MTDR, PE, PXD, RSPP and XEC. Bakken includes OAS and WLL. Other GoM includes EXXI and WTI.
2. Talos numbers are based on 2P NAV at 5/3/18 Strip Pricing: 2018: $67.19/$2.79, 2019: $62.02/$2.71, 2020: $56.86/$2.70, 2021 onwards: $65.00/$3.00
Well Positioned Relative to both Offshore and Onshore Peers
