Cautionary Statement Regarding Forward-Looking Statements

This presentation contains forward-looking statements in which we discuss factors we believe may affect our performance in the future. Forward-looking statements are all statements other than historical facts, such as statements regarding projected sales volumes, projected unit net cash costs, projected operating cash flows, projected capital expenditures, the impact of copper, gold and molybdenum price changes, and potential future dividend payments and open market purchases of FCX common stock. Accuracy of the forward-looking statements depends on assumptions about events that change over time and is thus susceptible to periodic change based on actual experience and new developments. FCX cautions readers that it assumes no obligation to update or publicly release any revisions to the forward-looking statements in this presentation and, except to the extent required by applicable law, does not intend to update or otherwise revise the forward-looking statements more frequently than quarterly. Additionally, important factors that might cause future results to differ from these projections include mine sequencing, production rates, industry risks, commodity prices, political risks, weather-related risks, labor relations, currency translation risks and other factors described in FCX's Annual Report on Form 10-K for the year ended December 31, 2007, filed with the Securities and Exchange Commission (SEC), as updated by our subsequent filings with the SEC.

In our filings with the SEC, we disclose recoverable proven and probable reserves calculated in accordance with Industry Guide 7 as required by the Securities and Exchange Act of 1934. In this presentation we refer to potential reserve additions and use phrases such as "mineralized material." Potential reserve additions will not qualify as reserves until sufficient mapping, drilling, sampling, and assaying are completed and until comprehensive engineering studies establish their economic feasibility. Accordingly, no assurance can be given that any potential reserve additions will become recoverable proven or probable reserves. We urge you to consider closely the disclosure of recoverable proven and probable reserves in our Annual Report on Form 10-K for the year ended December 31, 2007, as updated by our subsequent filings with the SEC.

This presentation also contains certain financial measures such as unit net cash costs per pound of copper and unit net cash costs per pound of molybdenum. As required by SEC Regulation G, reconciliations of these measures to amounts reported in FCX's consolidated financial statements or pro forma consolidated financial results are in the supplemental schedule, "Product Revenues and Production Costs," which is available on our internet web site www.fcx.com.

*2009e & 2010e Average Annual Operating Cash Flow (excluding Working Capital)**

(\$800 Gold & \$9 Molybdenum)

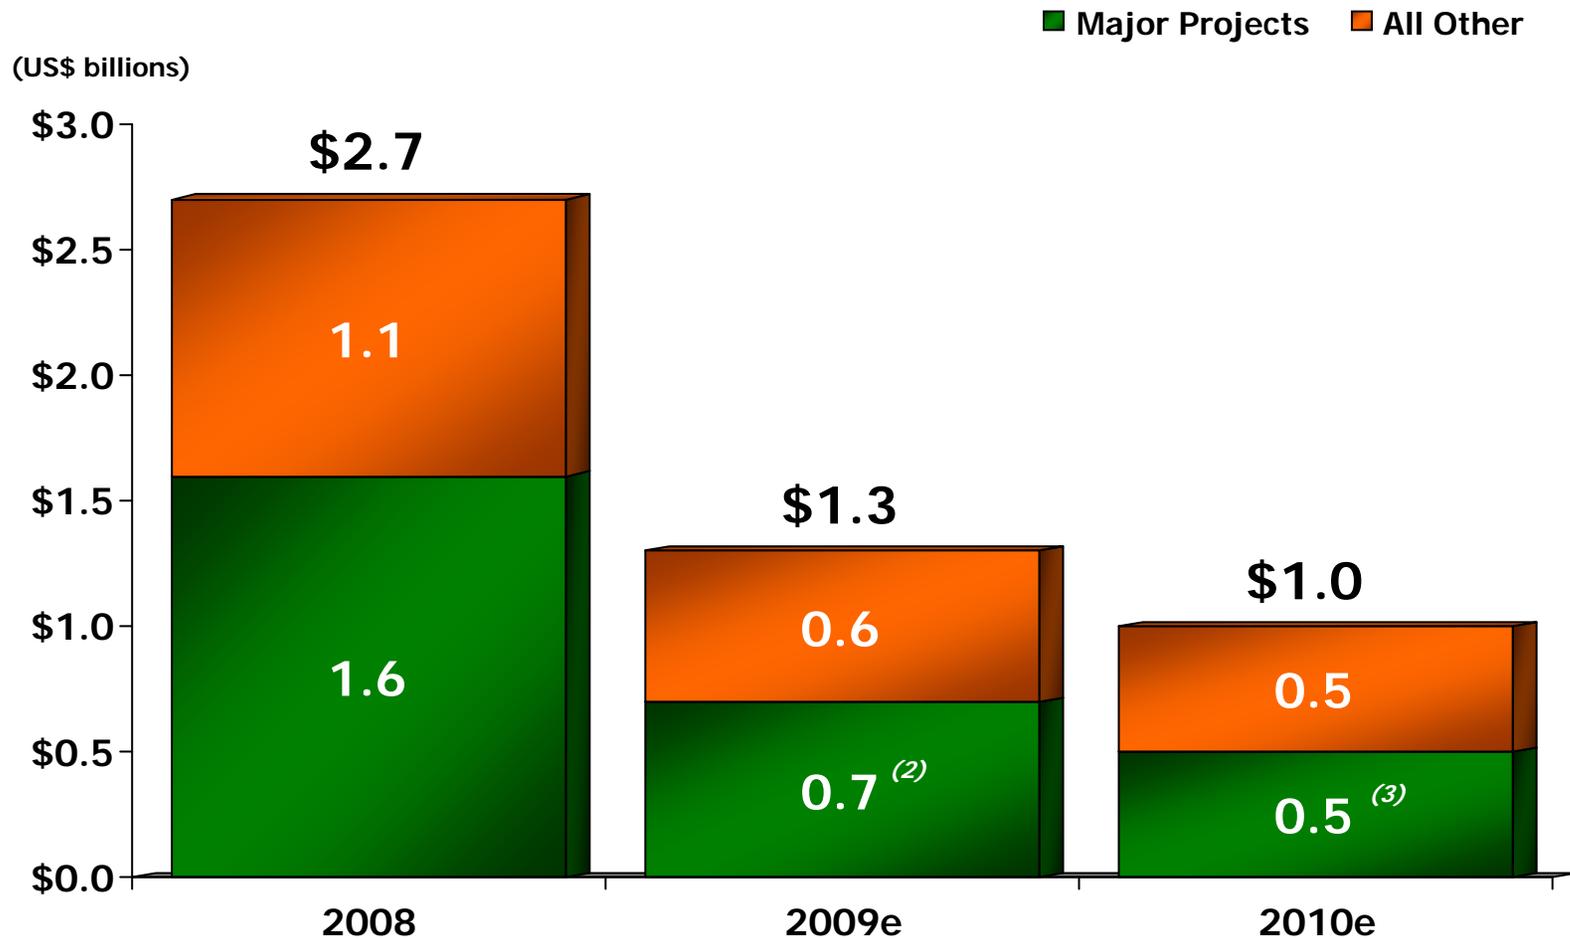

* Excludes working capital changes. 2009e expected to be impacted by negative working capital totaling \$600 million (at \$1.50 copper) primarily associated with final settlement to customers on 2008 open pounds. Initiatives to reduce working capital requirements under way.

Note: On an annual basis, each \$50/oz change in gold approximates \$100 million to EBITDA and \$60 million to operating cash flow; each \$2.00/lb of molybdenum equates to \$110 million to EBITDA and \$100 mm to operating cash flow. EBITDA equals operating income plus depreciation, depletion, and amortization.
