Cautionary Statement Regarding Forward-Looking Statements

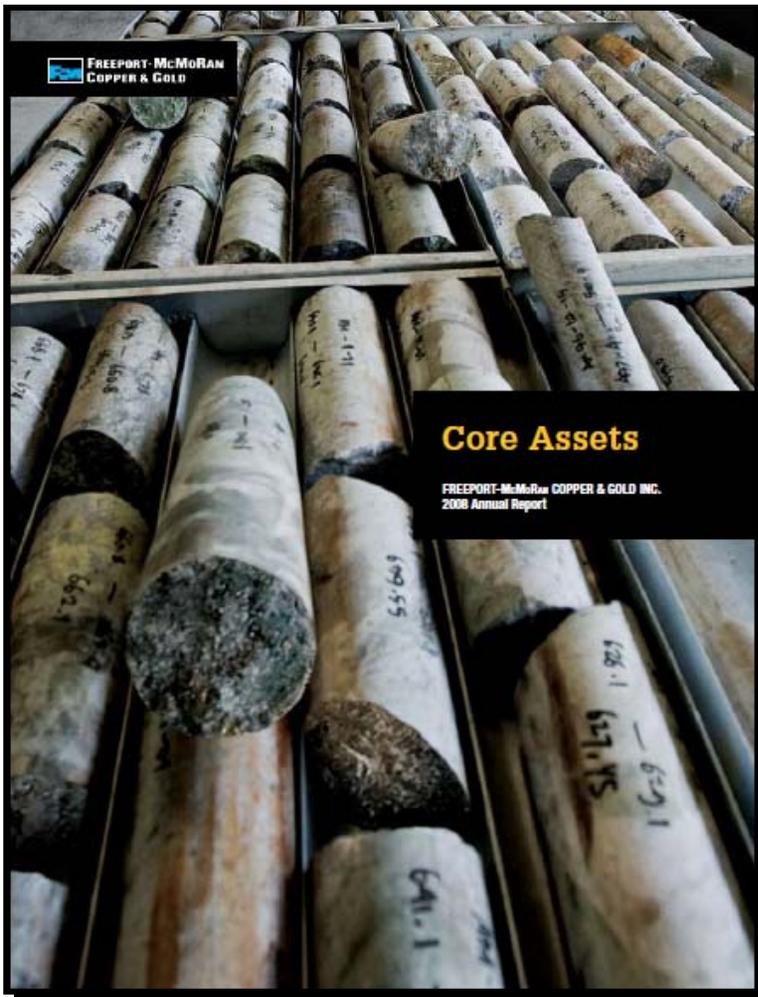

Core Assets

This presentation contains forward-looking statements in which we discuss factors we believe may affect our performance in the future. Forward-looking statements are all statements other than historical facts, such as statements regarding projected ore grades and milling rates, projected sales volumes, projected unit net cash costs, projected operating cash flows, projected capital expenditures, the impact of copper, gold, molybdenum and cobalt price changes, reserve estimates, potential prepayments of debt, projected EBITDA and future dividend payments. The declaration and payment of dividends is at the discretion of the Company's Board of Directors and will depend on the Company's financial results, cash requirements, future prospects, and other factors deemed relevant by the Board. This press release also includes forward-looking statements regarding mineralized material not included in reserves. The mineralized material described in this press release will not qualify as reserves until comprehensive engineering studies establish their economic feasibility. Accordingly, no assurance can be given that the estimated mineralized material not included in reserves will become proven and probable reserves. Accuracy of the forward-looking statements depends on assumptions about events that change over time and is thus susceptible to periodic change based on actual experience and new developments. FCX cautions readers that it assumes no obligation to update the forward-looking statements in this presentation and does not intend to update the forward-looking statements more frequently than quarterly. Additionally, important factors that might cause future results to differ from results anticipated by forward-looking statements include mine sequencing, production rates, industry risks, commodity prices, political risks, potential effects of violence in Indonesia, potential outcomes of the contract review process in the Democratic Republic of Congo, weather-related risks, labor relations, currency translation risks and other factors described in FCX's Annual Report on Form 10-K for the year ended December 31, 2008, filed with the Securities and Exchange Commission (SEC), as updated by our subsequent filings with the SEC.

This presentation also contains certain financial measures such as unit net cash costs per pound of copper. As required by SEC Regulation G, reconciliations of these measures to amounts reported in FCX's consolidated financial statements are in the supplemental schedule, "Product Revenues and Production Costs," which is available on our internet web site www.fcx.com.
