Cautionary Statement

This presentation contains forward-looking statements in which we discuss factors we believe may affect our potential performance in the future. Forward-looking statements are all statements other than statements of historical facts, such as statements regarding projected ore grades and milling rates, projected production and sales volumes, projected unit net cash costs, projected operating cash flows, projected capital expenditures, the impact of copper, gold, molybdenum and cobalt price changes, reserve estimates, exploration efforts and results, mine production and development plans, the impact of deferred intercompany profits on earnings, liquidity, other financial commitments and tax rates, potential prepayments of debt, projected EBITDA, future dividend payments and potential share purchases. The words “anticipates,” “may,” “can,” “plans,” “believes,” “estimates,” “expects,” “projects,” “intends,” “likely,” “will,” “should,” “to be” and any similar expressions are intended to identify those assertions as forward-looking statements. The declaration of dividends is at the discretion of the Company's Board of Directors and will depend on the Company's financial results, cash requirements, future prospects, and other factors deemed relevant by the Board. This presentation also includes forward-looking statements regarding mineralized material not included in reserves. The mineralized material described in this presentation will not qualify as reserves until comprehensive engineering studies establish their economic feasibility. Accordingly, no assurance can be given that the estimated mineralized material not included in reserves will become proven and probable reserves.

We caution readers that forward-looking statements are not guarantees of future performance and our actual results may differ materially from those anticipated, projected or assumed in the forward-looking statements. Important factors that can cause our actual results to differ materially from results anticipated in the forward-looking statements include commodity prices, mine sequencing, production rates, industry risks, regulatory changes, political risks, potential effects of violence in Indonesia, the resolution of administrative disputes in the Democratic Republic of Congo, weather and climate-related risks, labor relations including the resolution of labor negotiations and strikes in Indonesia and Peru, environmental risks, litigation results, currency translation risks and other factors described in more detail under the heading “Risk Factors” in our Annual Report on Form 10-K for the year ended December 31, 2010, filed with the U.S. Securities and Exchange Commission (SEC) as updated by our subsequent filings with the SEC.

Investors are cautioned that many of the assumptions on which our forward-looking statements are based are likely to change after our forward-looking statements are made, including for example commodity prices, which we cannot control, and production volumes and costs, some aspects of which we may or may not be able to control. Further, we may make changes to our business plans that could or will affect our results. We caution investors that we do not intend to update our forward-looking statements, notwithstanding any changes in our assumptions, changes in our business plans, our actual experience, or other changes, and we undertake no obligation to update any forward-looking statements more frequently than quarterly.

This presentation also contains certain financial measures such as unit net cash (credits) costs per pound of copper and per pound of molybdenum. As required by SEC Regulation G, reconciliations of these measures to amounts reported in the Company's consolidated financial statements are in the supplemental schedule, “Product Revenues and Production Costs,” which is available on our internet website www.fcx.com.

(1) Estimates assume average prices of \$3.25/lb for copper, \$1,600/oz for gold, \$14/lb for molybdenum and \$14/lb for cobalt for the remaining three months of 2011. Quarterly unit costs will vary significantly with quarterly metal sales volumes and average prices and are subject to change based on the timing of the resumption of normal operations at PT-FI and other factors. Consolidated unit net cash costs for 2011 would change by ~\$0.006/lb for each \$50/oz change in gold and by ~\$0.004/lb for each \$2/lb change in molybdenum for the remaining three months of 2011.

(2) Production costs include profit sharing in South America and severance taxes in North America.

(3) Includes molybdenum produced in South America.

Average Operating Cash Flow (excluding Working Capital changes)*

(\$1,200 Gold & \$12 Molybdenum)

* Based on operating plans, volumes and costs for average of 2012e & 2013e.

Note: For 2012e/2013e average, each \$50/oz change in gold approximates \$70 million to EBITDA and \$40 million to operating cash flow; each \$2.00/lb change in molybdenum approximates \$150 million to EBITDA and \$120 million to operating cash flow. EBITDA equals operating income plus depreciation, depletion and amortization.
