

CORPORATE PRESENTATION

January 2014

Cautionary Notes

Cautionary Note Regarding Forward-Looking Statements:

This presentation contains "forward-looking statements" within the meaning of the U.S. Private Securities Litigation Reform Act of 1995 and "forward looking information" within the meaning of Canadian securities laws (collectively, "forward-looking statements") concerning the anticipated developments in our operations in future periods, our planned exploration activities, the adequacy of our financial resources and other events or conditions that may occur or exist in the future. These statements relate to analyses and other information that are based on forecasts of future results, estimates of amounts not yet determinable and assumptions of management.

Generally, forward-looking statements can be identified by the use of words or phrases such as "expects," "anticipates," "plans," "projects," "estimates," "assumes," "intends," "strategy," "goals," "objectives," "potential" or variations thereof, or stating that certain actions, events or results "may," "could," "would," "might" or "will" be taken, occur or be achieved, or the negative of any of these terms or similar expressions. These forward-looking statements are subject to a variety of risks, uncertainties and other factors that could cause actual events or results to differ from those expressed or implied, including, without limitation, risks and uncertainties related to: production and cost estimates for our material properties; future exploration and development; Mineral Reserves and Mineral Resources estimates and our ability to extract mineralization profitably and replace our Mineral Reserves; our ability to obtain adequate financing; fluctuations in exchange rates and in spot and forward prices for silver, gold and base metals and certain other commodities; counterparty and market risks related to the sale of our concentrates; political, financial, social, legal or economic developments or changes in any of the countries where we carry on business; compliance with environmental laws and regulations; title to our mineral properties and the surface rights thereon; competition in the mining industry and a shortage of mining services, properties, equipment, qualified personnel and management; regulatory compliance costs; claims and legal proceedings, including adverse rulings in current or future litigation; the terms of our outstanding convertible notes; and those other various risks and uncertainties identified under the heading "Risk Factors" in our most recent Form 40-F and Annual Information Form filed with the U.S. Securities and Exchange Commission (the "SEC") and Canadian securities regulatory authorities.

Our forward-looking statements are based on what management currently considers to be reasonable assumptions, beliefs, expectations and opinions and we cannot assure you that actual events, performance or results will be consistent with these forward-looking statements. Assumptions have been made regarding, among other things, the discovery of Mineral Reserves and Mineral Resources on our mineral properties, the costs of operating and exploration expenditures and those other assumptions identified under the heading "Cautionary Notice Regarding Forward Looking Statements" in our most recent Form 40-F Annual Information Form. Our forward-looking statements reflect current expectations regarding future events and operating performance and we do not assume any obligation to update forward-looking statements if circumstances or management's opinions should change other than as required by applicable law. For the reasons set forth above, you should not place undue reliance on forward-looking statements. All references to "$" in this presentation are to U.S. dollars unless otherwise stated.

Cautionary Note to U.S. Investors:

The disclosure included in this presentation uses Mineral Reserves and Mineral Resources classification terms that comply with reporting standards in Canada and the Mineral Reserves and Mineral Resources estimates are made in accordance with Canadian National Instrument 43-101—Standards of Disclosure for Mineral Projects ("NI 43-101"). NI 43-101 is a rule developed by the Canadian Securities Administrators that establishes disclosure standards with respect to scientific and technical information concerning mineral projects. These standards differ significantly from the requirements of the SEC set out in Industry Guide 7. Consequently, Mineral Reserves and Mineral Resources information included in this presentation is not comparable to similar information that would generally be disclosed by domestic U.S. reporting companies subject to the SEC requirements. Under SEC standards, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically produced or extracted at the time the reserve determination is made.

Cautionary Note Regarding Non-GAAP Measures:

This presentation includes certain terms or performance measures commonly used in the mining industry that are not defined under International Financial Reporting Standards ("IFRS"), including cost of inventory, cash costs and total costs per payable ounce of silver sold and adjusted net income (loss) and adjusted basic earnings (loss) per share. We believe that, in addition to conventional measures prepared in accordance with IFRS, certain investors use this information to evaluate our performance. The data presented is intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These non-GAAP measures should be read in conjunction with our condensed consolidated interim financial statements.

Why Silver Standard?

SILVER STANDARD

ASSETS

Production and organic growth from a diversified portfolio

CAPITAL

Funded with cash and cash flow for growth and opportunity

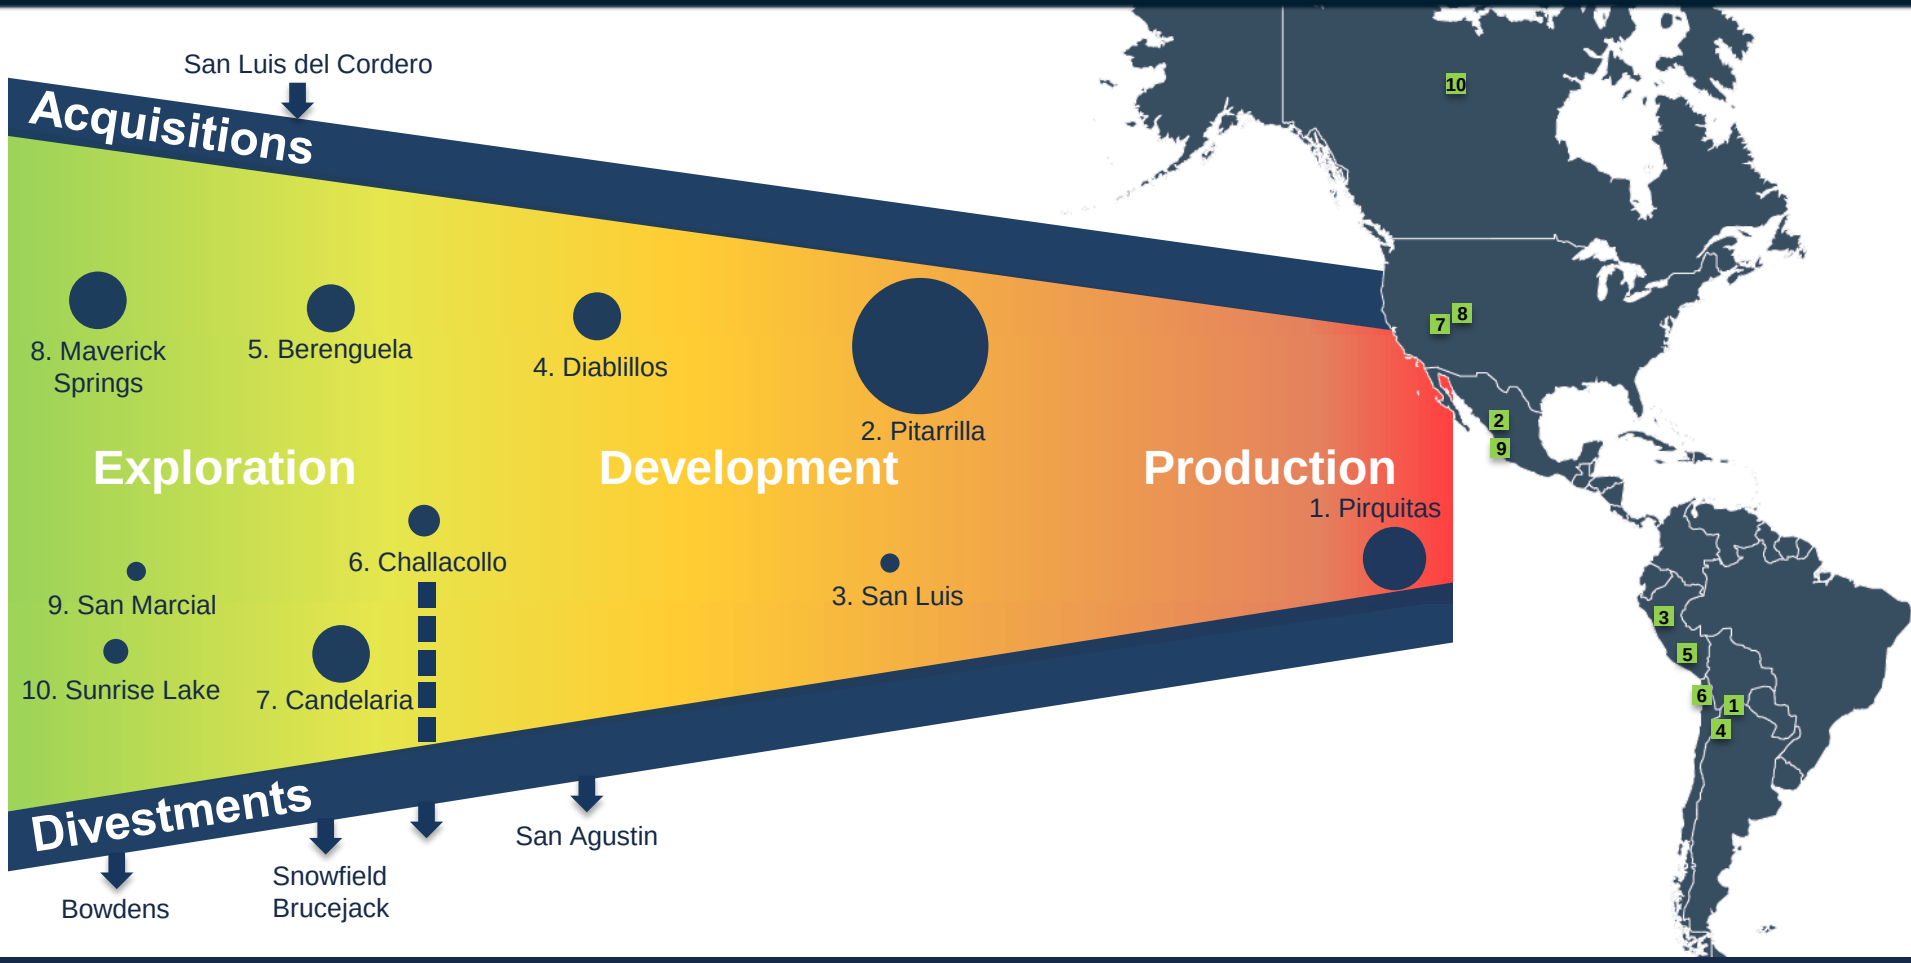

MANAGEMENT

Capable team of managers & operators delivering on plan

Leverage to silver

Our Business Portfolio

SILVER STANDARD

Exceptional growth portfolio

Delivering Now and for the Future

SILVER STANDARD

2012

- Exceeded silver production guidance
- Generated positive operating cash flow
- Completed Pitarrilla feasibility study
- Tripled reserves
- Strengthened Balance Sheet

PIRQUITAS DELIVERING

2013

- Produced 8.2 Moz of silver
- Exceeded zinc production guidance
- Implemented restructuring program at Pirquitas
- Assessing Pitarrilla
- Maintained strong balance sheet
- Sold San Agustin for value

COST REBASED

2014 Goals

- Advance operational excellence at Pirquitas
- Define development pathways for San Luis and Pitarrilla
- Maintain cost discipline throughout the organization
- Focus on growth opportunities

PRIMED FOR GROWTH

Pirquitas: Focused on Delivery

Operations

- Continue to deliver predictable performance
- Completed transition to Phase 2 of the San Miguel Open Pit
- Focus on operating excellence
- 2013 Results
  - 8.2 Moz Ag production
  - 27 Mlb Zn production
- 2014 Guidance
  - 8.2 – 8.6 Moz Ag production
  - 25 – 30 Mlb Zn production
  - $12.50 - $13.50/oz cash cost

    (per payable ounce of silver sold)

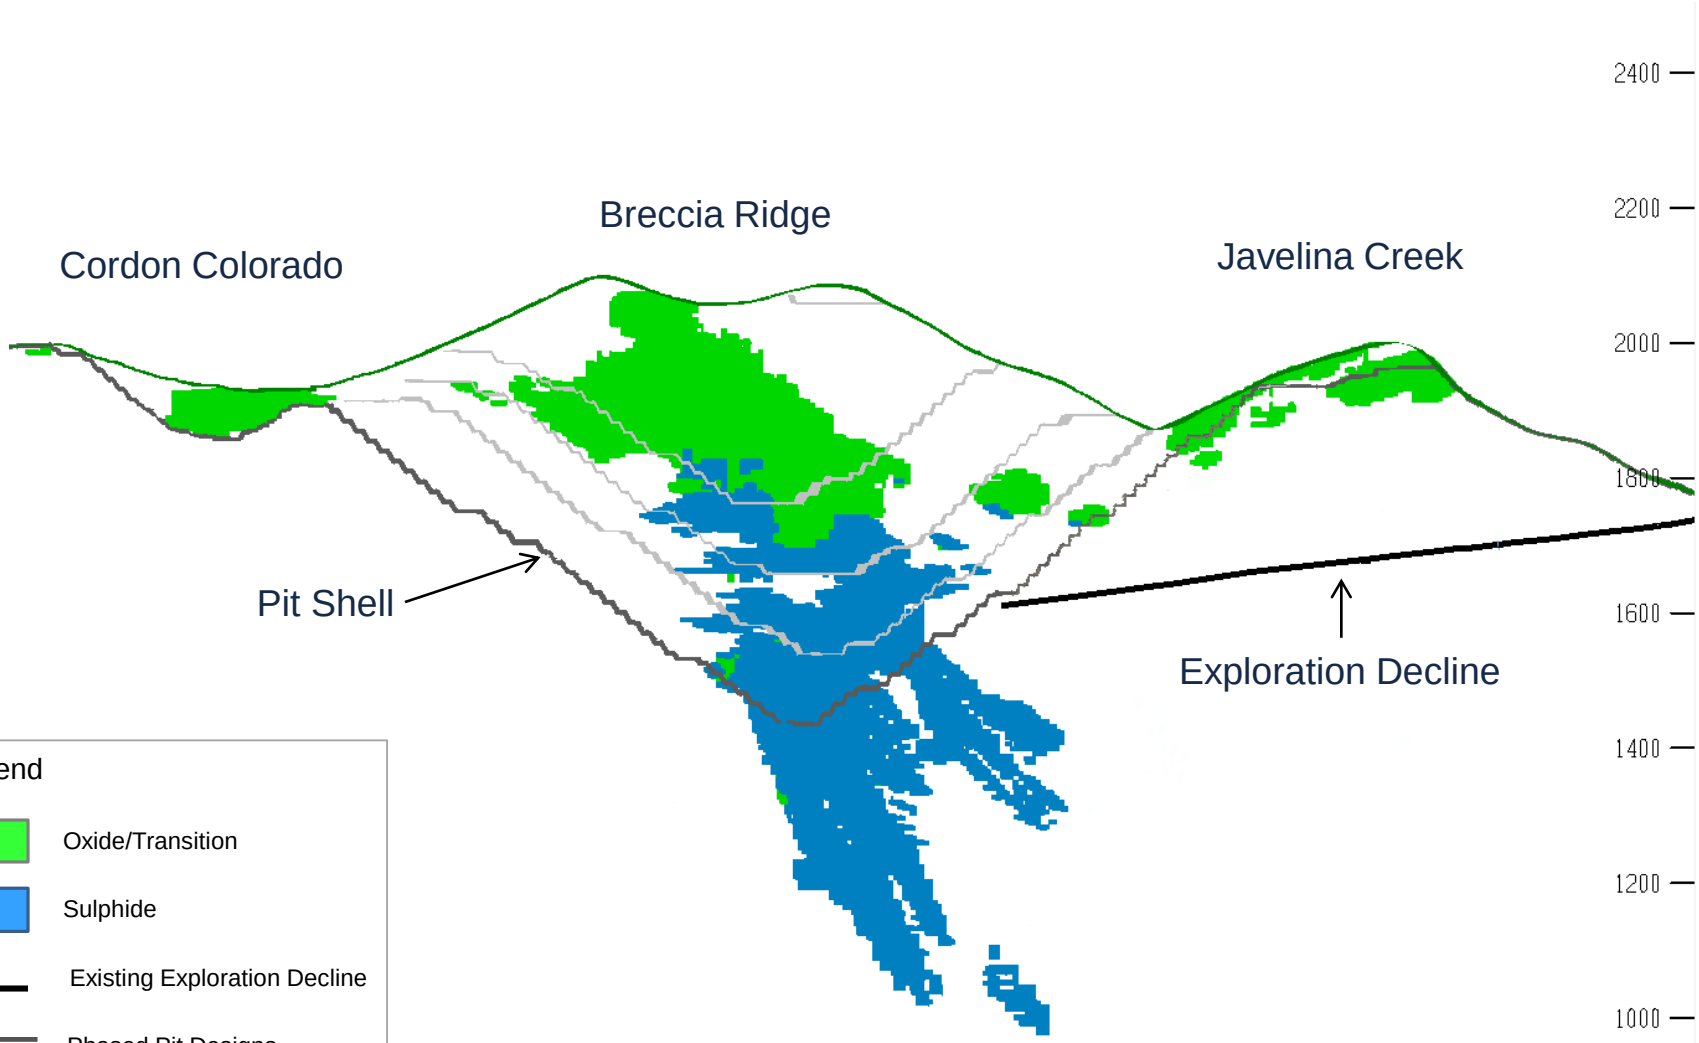

Cost and Optimization

- Lowered 2013 cash cost guidance
- Advanced cost restructuring program
  - Contracts
  - Operational performance
  - People

See presentation endnotes on calculation of cash costs.

Pitarrilla: Geology and Feasibility Pit Outline

Pitarrilla in 2013

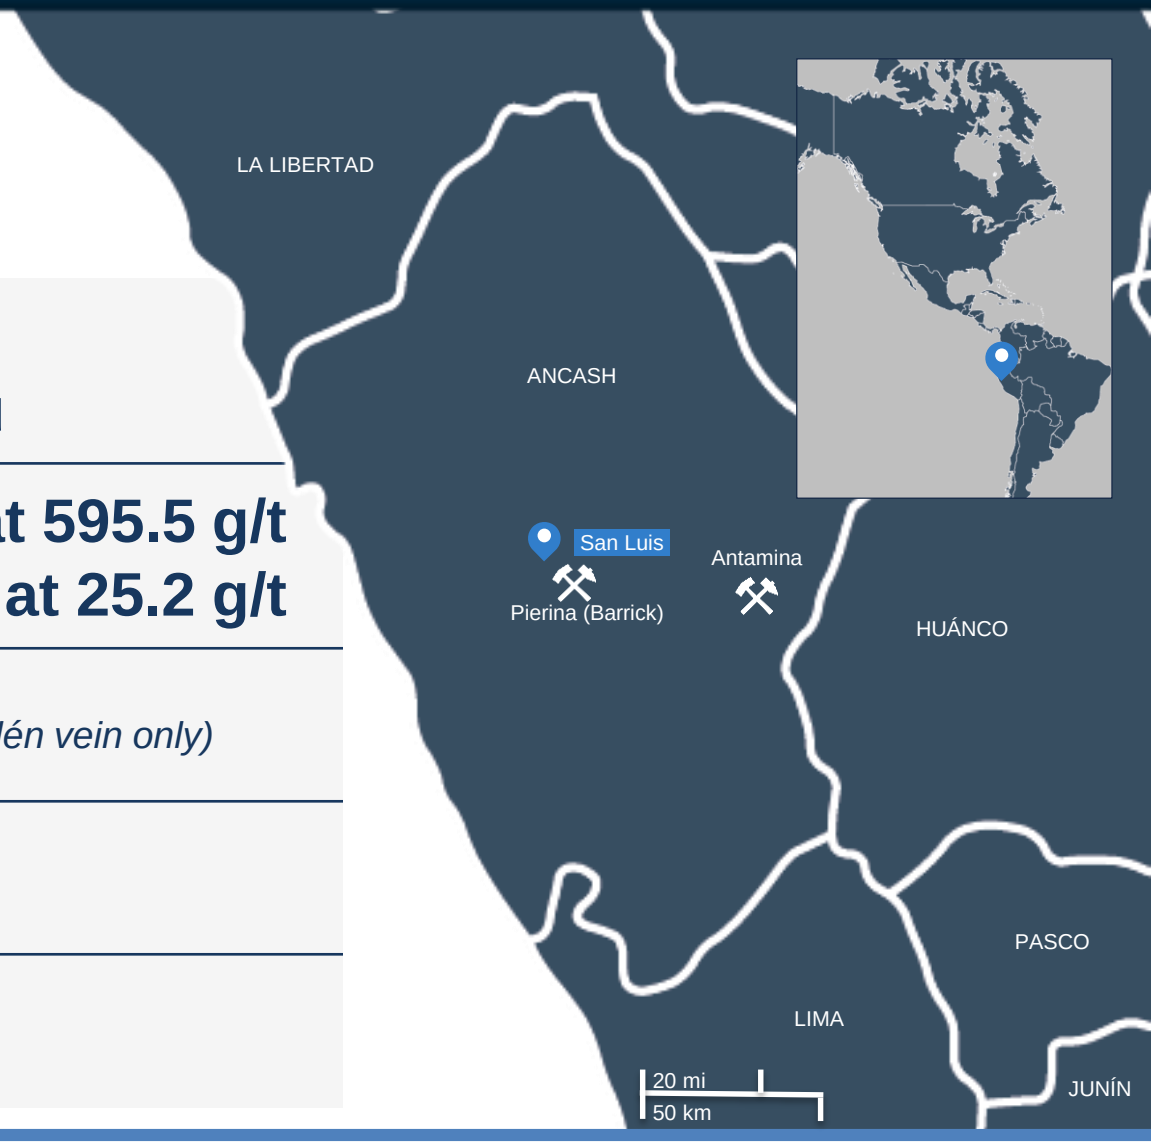

- Acquired key surface rights
- Submitted environmental and operating permits applications
- Performed engineering and infrastructure work
- Pursued financing plan

Pitarrilla
Durango, Mexico

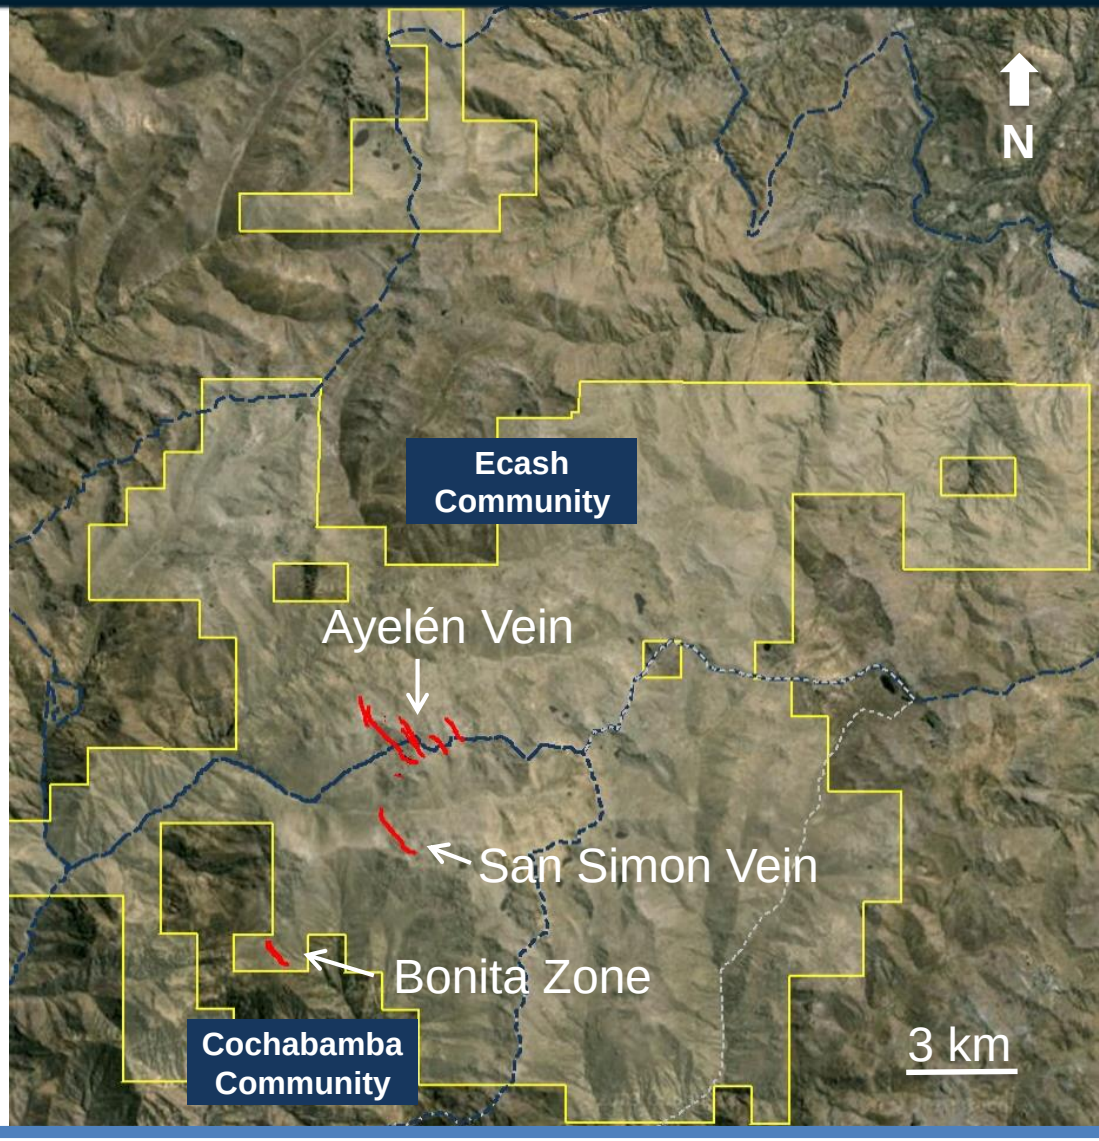

San Luis: Our High Grade Gold & Silver Project

Estimated Average Annual Production	**1.9M oz Ag** **78,000 oz Au**
Resources (M + I)	**8.9M oz Ag at 595.5 g/t** **0.35M oz Au at 25.2 g/t**
Estimated Mine Life	**3.5 Years** *(Ayelén vein only)*
Estimated Capital Expenditures	**$90 - $100M**
Estimated Construction Time	**<2 Years**

San Luis: Advancing Toward Value

- Feasibility study (2Q10)
- Consolidated interest (3Q11)
- Cochabamba agreement (4Q11)
- EIA approved (3Q12)
- Ecash community agreement progressing
- Drilling the Bonita Zone in 2014

Extensive Exploration & Development Portfolio

STANDARD

APPENDICES

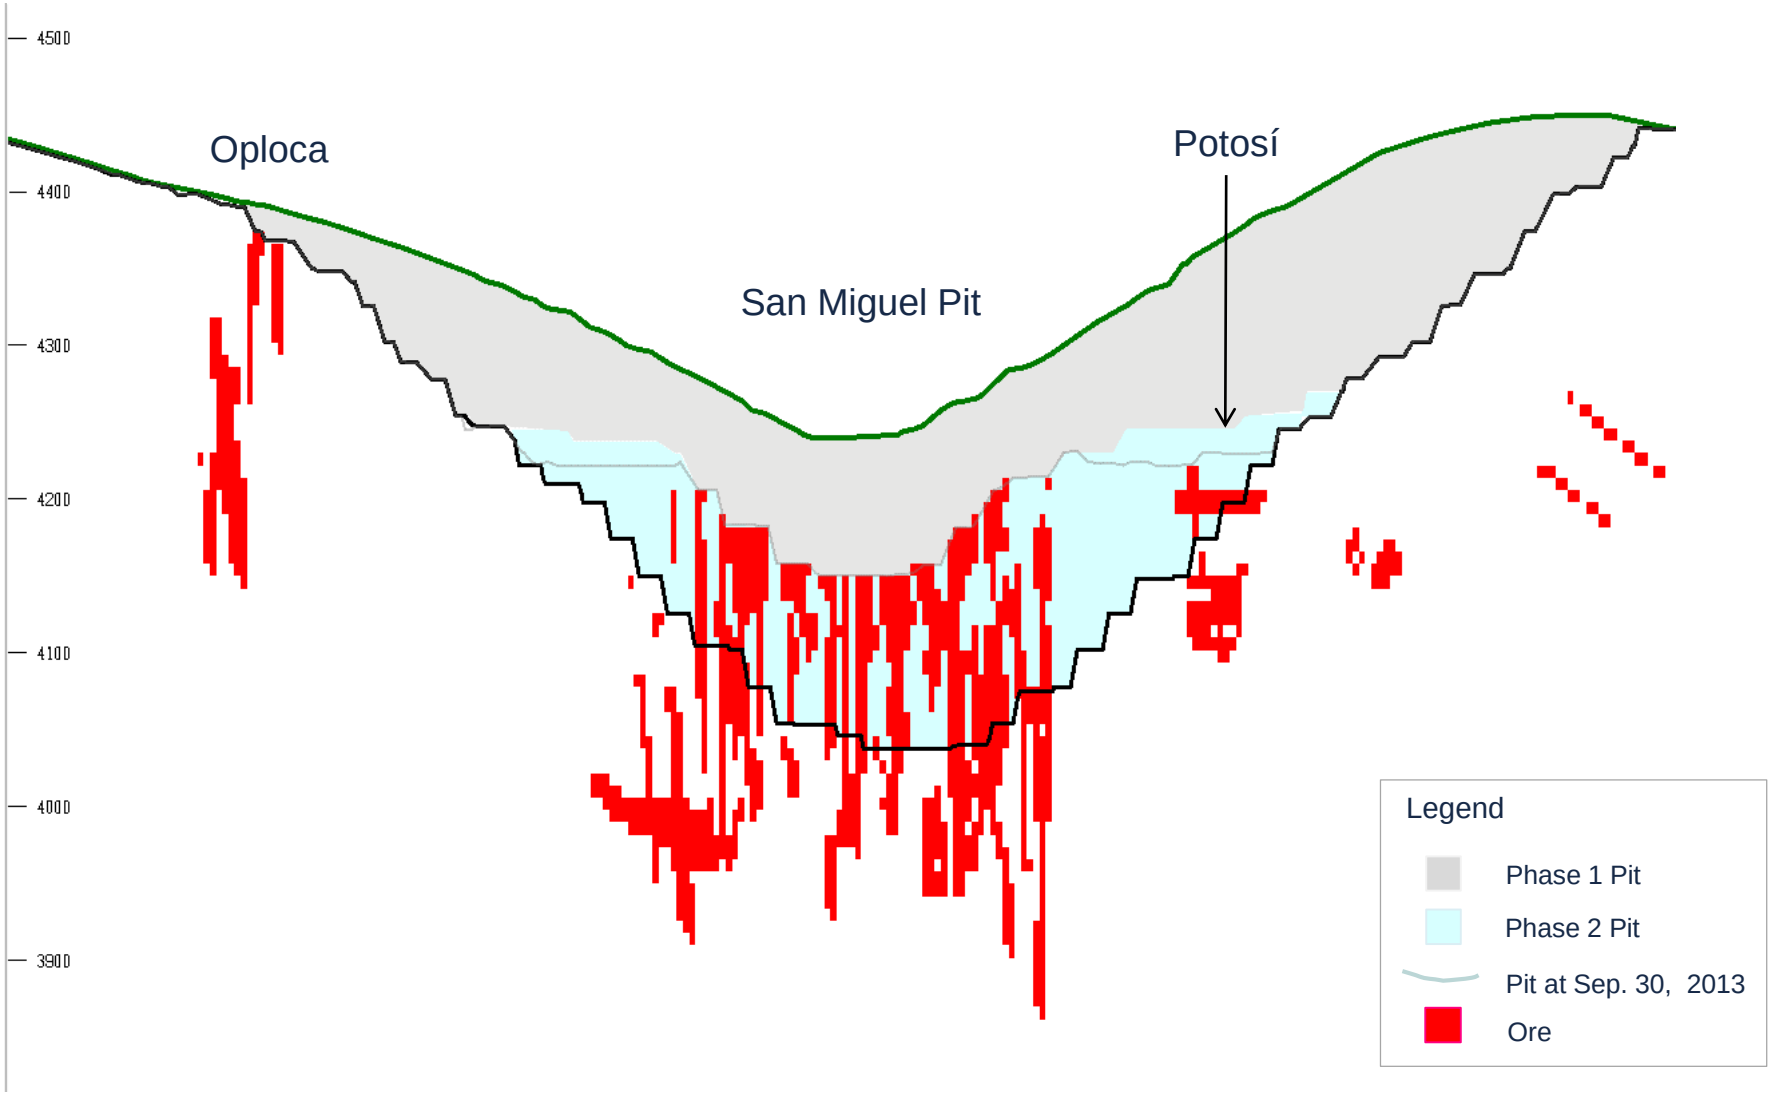

Pirquitas: Large Open Pit Silver Mine

- Jujuy Province, Argentina
- 100% owned and operated silver and zinc mine
- Commercial production - December 2009
- +8.0 Moz average annual production
- 80 Moz Ag Reserves (P+P)
- 148 Moz Ag Resources (M+I)

Pirquitas: Pit Transition

Pitarrilla: Low Cost, Long Life

SILVER STANDARD

Feasibility Study Results
(December 2012)

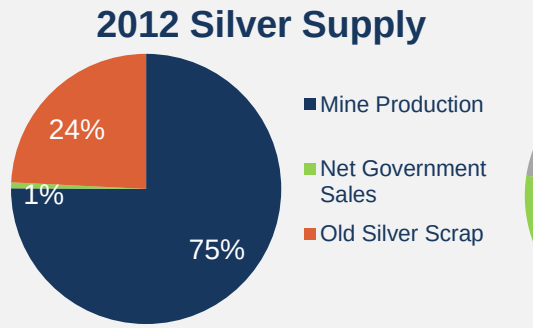

- 32-year life: 479Moz Ag reserves
- Avg. production: 15Moz Ag *(1st 18 years)*
- Cash cost: $10.01/oz
- Capital: $741M
- Strip rate: 6:1
- Mill throughput: 16,000 tpd
- NPV *(after tax)*: $737M *($25/oz Ag price)*
- IRR *(after tax)*: 12.8% *($25/oz Ag price)*

Reserves & Resources: Notes to Tables

All estimates of Mineral Reserves and Mineral Resources in the Reserves and Resources are stated as at December 31, 2012 and have been prepared in accordance with NI 43-101 under the supervision of a Qualified Person named below for the respective properties. Mineral Resources which are not Mineral Reserves do not have demonstrated economic viability. Mineral Resources and Mineral Reserves figures have been rounded to the nearest 0.1 million tonnes and the nearest 0.1 million ounces for silver and the 0.01 million ounces for gold. Exact totals can be found in the corresponding NI 43-101 Technical Report for each property.

All Technical Reports referenced below are available under the Company's profile in SEDAR or on the Company's website at www.silverstandard.com.

Pirquitas

Mineral Reserve and Mineral Resource estimates are reported below the as-mined surface as at December 31, 2012. The Mineral Reserves estimate was completed by Andrew W. Sharp FAusIMM and Trevor J. Yeomans, P.Eng., ACSM, as Qualified Persons in accordance with the standards of NI 43-101. Mineral Reserves are presented at a cut-off of US$35.52 per tonne net smelter return ("NSR"), using US$25.00 per troy ounce silver and US$2,403.00 per tonne zinc; these values remain the same as used in the 2011 Pirquitas Technical Report. Mineral Resources for the Mining Area (includes San Miguel, Potosi, and Oploca zones) were estimated by Dr. Warwick S. Board, P.Geo., as a Qualified Person in accordance with the standards of NI 43-101 in the 2011 Pirquitas Technical Report. The Mineral Resources estimate of the Cortaderas Area was completed by Jeremy D. Vincent, P.Geo., as a Qualified Person in accordance with the standards of NI 43-101. Mineral Resources are reported above a cut-off grade of 50 grams per tonne silver and are reported inclusive of Mineral Reserves. All Measured Mineral Resources are situated in the Mining Area. Indicated Resources in the Mining Area comprise 15.9 million tonnes, totalling 72.8 million ounces of silver. Stockpile material comprises 1.4 million tonnes of mined material, totalling 6.1 million ounces of silver. Inferred Resources in the Mining Area comprise 0.03 million tonnes, totalling 0.1 million ounces of silver. For a complete description of the key assumptions, parameters and methods used to estimate the Mineral Reserves and Mineral Resources, please refer to the 2011 Pirquitas Technical Report. Proven and Probable Mineral Reserves are inclusive of Stockpiles. Measured and Indicated Mineral Resources are inclusive of Reserves and Stockpiles.

Pitarrilla

Mineral Reserve and Mineral Resource estimates are as at December 4, 2012 and are contained in the 2012 Pitarrilla Technical Report. The Mineral Reserves estimate was completed by Andrew W. Sharp, FAusIMM, as a Qualified Person in accordance with the standards of NI 43-101. The Mineral Reserves estimate uses a NSR calculation to determine cut-off using US$25.00 per troy ounce silver, US$0.90 per pound lead and US$0.95 per pound zinc. The Mineral Reserves contain two ore types-direct leach ore and flotation/leach ore. The constant cut-off value for direct leach ore is US$16.38/tonne and for flotation/leach ore is US$16.40/tonne. The NSR calculation method varies for the two ore types. For the two ore types combined, the overall average process recovery of silver, lead, and zinc are 69.6%, 57.4%, and 61.3%, respectively. The Mineral Resources estimate is as at December 4, 2012, and was completed by Jeremy D. Vincent, P.Geo., as a Qualified Person in accordance with the standards of NI 43-101. Mineral Resources are reported above a cut-off grade of 30 grams per tonne silver and are reported inclusive of Mineral Reserves. No mining activity has occurred on the property from December 4, 2012 to December 31, 2012. Silver (Ag) was estimated using Localised Uniform Conditioning (LUC). Lead (Pb) and Zinc (Zn) were estimated using Ordinary Kriging (OK).

San Luis

Mineral Reserve and Mineral Resource estimates are as at June 4, 2010 and are contained in the San Luis Feasibility Study. The Mineral Reserves estimate was completed by Steve L. Milne, P.E., a Qualified Person in accordance with the standards of NI 43-101. Mineral Reserves are reported at a cut-off grade of 6.9 grams per tonne gold equivalent, based on US$800.00 per troy ounce gold, US$12.50 per troy ounce silver, and recoveries of 94% gold and 90% silver, as presented in the San Luis Feasibility Study. Mineral Resources estimate was completed by Michael J. Lechner, P.Geo., and Donald F. Earnest, P.G., as Qualified Persons in accordance with the standards of NI 43-101. Mineral Resources are reported above a gold-equivalent cut-off grade of 6.0 grams per tonne based on US$600.00 per troy ounce gold and US$9.25 per troy ounce silver. Mineral Resources are reported inclusive of Mineral Reserves. Inferred gold resources are less than 0.005 million ounces and are presented as 0.00 million ounces due to rounding. No mining activity has occurred on the property from June 4, 2010 to December 31, 2012.

Reserves & Resources: Notes to Tables

Diablillos
Mineral Resources estimate was completed by Gilles Arseneau, Ph.D., P.Geo., a Qualified Person, in accordance with the standards of NI 43-101, in a technical report completed by Wardrop, a TetraTech company, entitled "Technical Report on the Diablillos Property-Salta and Catamarca Provinces, Argentina" dated July, 2009. Mineral Resources are reported above a recoverable metal value (RMV) cut-off value of US$10 RMV based on metal prices of US$11.00 per troy ounce silver and US$700.00 per troy ounce gold using metal recoveries of 40% and 65%, respectively.

San Agustin
Mineral Resources estimate was completed by Gilles Arseneau, Ph.D., P.Geo., a Qualified Person, in accordance with the standards of NI 43-101, in a technical report completed by Wardrop, a TetraTech company, entitled "San Agustin Resources Estimate" dated March, 2009. Mineral Resources are reported within an optimized pit-shell above RMV cut-off values of US$3.40 RMV in oxide mineralization and US$6.25 in sulphide mineralization using metal prices of US$11.63 per troy ounce silver, US$631.97 per troy ounce gold, US$0.78 per pound lead, and US$1.11 per pound zinc, using a RMV formula as follows: (Au g/t * 14.63) + (Ag g/t *0.28) + (Pb% * 8.59) + (Zn% * 15.12). Recovery rates were 72% for gold, 74% for silver, 50% for lead and 62% for zinc.

Berenguela
Mineral Resources estimate was completed by James A. McCrea, P.Geo., a Qualified Person, in accordance with the standards of NI 43-101, in a technical report dated October 4, 2005. Mineral Resources are reported above a 50 gram per tonne silver cut-off.

Challacollo
Mineral Resources estimate was completed by the Company in accordance with the standards of NI 43-101. Mineral Resources are reported above a 50 gram per tonne silver cut-off. C. Stewart Wallis, P.Geo., a Qualified Person, reviewed and confirmed the estimation methodology and classification of Indicated and Inferred Mineral Resources in a report dated September 17, 2003.

Candelaria
Mineral Resources estimate was completed by Mark G. Stevens, P.G., a Qualified Person, in accordance with the standards of NI 43-101, in a technical report completed by Pincock Allen & Holt and dated May 24, 2001. Mineral Resources are reported above a 0.5 troy ounces per ton cyanide soluble silver cut-off.

Maverick Springs
We currently hold a 55% interest in the Maverick Springs Project through a joint venture. Our 55% interest in the Maverick Springs Project entitles the Company to all silver produced from the project while the Company's joint venture partner is entitled to all gold produced from the project. Mineral Resources estimate was completed in accordance with the standards of NI 43-101 by Snowden Mining Industry Consultants Inc. under the supervision of Neil Burns, P.Geo., a Qualified Person, in a technical report dated April 13, 2004. Mineral Resources are reported above a 1 ounce per tonne silver equivalent cut-off using metal prices of US$327.00 per ounce gold and US$4.77 per ounce silver. The silver equivalent grade was determined as follows: Ag g/t + (Au g/t * 68.46).

San Marcial
Mineral Resources estimate was prepared by the Company in accordance with the standards of NI 43-101 and confirmed by C. Stewart Wallis, P. Geo., a Qualified Person, in a technical report dated October 15, 2002. Mineral Resources are reported above a 30 gram per tonne silver cut-off.

Sunrise Lake
Mineral Resources estimate was completed in accordance with the standards of NI 43-101 by C. Stewart Wallis, P.Geo., of Roscoe Postle Associates Inc., a Qualified Person, in a technical report dated September 3, 2003. Mineral Resources are reported above a 30 gram per tonne silver cut-off.

Presentation Endnotes

1) All amounts are in U.S. dollars unless otherwise stated.

2) CASH COSTS: Cash costs of $14 – 15/oz are based on average cost per payable silver ounce, net of by-product, with a $22/oz silver price, $0.85/lb zinc price and includes the impact of IFRIC 20. For the year ended December 31, 2012, the Company revised its presentation of its cash costs non-GAAP financial measure. Under the revised methodology, the Company reports cash costs and total costs on a "per payable ounce sold" basis, rather than on a per ounce produced basis as reported previously. Silver concentrate export duties that are being accrued but not paid have been reallocated to total production cost to reflect their non-cash nature as the Company has an order in its favor against their payment. Cash costs consist of the cost of inventory as presented in the consolidated financial statements, third party smelting, treatment, refining and transportation costs, royalties, less by-product revenue. Total costs consist of total cash costs plus depreciation, depletion, amortization and silver concentrate export duties. The divisor for both measures is payable silver ounces sold in the period.

3) PIRQUITAS: See the NI 43-101 Technical Report on the Pirquitas Mine, Jujuy Province, Argentina, dated December 23, 2011 filed on SEDAR and available on the company's website. See news release dated January 14, 2014 for cost guidance.

4) PITARRILLA: See the NI 43-101 Technical Report on the Pitarrilla Project, Durango State, Mexico, dated December 14, 2012 filed on SEDAR and available on the company's website.

5) PITARRILLA NPV / IRR: Net present value and internal rate of return assume a base case silver price of $30 per oz (Yr-3 to Yr -2), $27.50 (Yr-1 to Yr 2) and $25 thereafter.

6) SAN LUIS: See the Updated Mineral Resource Estimate San Luis Project, Ancash Department, Perú, dated January 9, 2009, and the Technical Report for the San Luis Project Feasibility Study dated effective June 4, 2010 filed on SEDAR and available on the company's website.
