## NEWS RELEASE

# Trevali further expands mineralization at Stratmat deposit in New Brunswick

### Highlights include:

**9.4 metres at 6.4% Zn, 2.9% Pb, 0.4% Cu, 81.3 g/t Ag & 1.79 g/t Au**  
**15.26 metres at 6.1% Zn, 3.3% Pb, 0.28% Cu, & 29.5 g/t Ag**

**Mineralized system now defined over 2.2 kilometres strike by 800 metres wide – remains open for expansion**

TV-NR-12-15

June 6, 2012

Vancouver, British Columbia...Trevali Mining Corporation (“Trevali” or the “Company”) (TSX: TV; BVL: TV; OTCQX: TREVF; Frankfurt: 4TI) is pleased to announce the receipt of final assay results of the 5,000-metre diamond drill program at its Stratmat polymetallic massive sulphide deposit in New Brunswick, Canada. The holes, collared approximately 1.2 kilometers south-west of the Stratmat Main Zone, were designed to test the Stratmat-S1 sulphide target horizons. All three holes intersected multiple zones of significant zinc-lead-copper-silver-gold mineralization (Table 1). **The Stratmat base metal system is now defined over 2.2-kilometres strike length by 800-metres wide and remains open for expansion at depth and on-strike** (Figure 1).

“Drilling at our Stratmat deposit continues to deliver extremely positive results – the size, scale and tenor of the zinc-lead-copper-silver-gold and associated alteration system clearly illustrates the magnitude of the Stratmat sulphide depositional event,” stated Dr. Mark Cruise, President of Trevali. “Receipt of these final assays marks the completion of what has been another exceptionally successful drill campaign for the Company and continues to re-affirm the quality and potential of the Company’s zinc (polymetallic) deposits in both Canada and Peru. All of our deposits remain open for expansion and we believe that there are a lot more tonnes to be discovered on our properties.”

The Stratmat deposit is a multi-lens volcanic sediment-hosted massive sulphide deposit that currently holds an estimated independent National Instrument 43-101 compliant inferred resource\* of **5.5 million tonnes grading 6.11% Zinc, 2.59% Lead, 0.40% Copper, 54.21 g/t Silver and 0.62 g/t Gold**. The deposit, located in the renowned Bathurst Mining Camp, is situated approximately 20 km east of the Company’s Halfmile Mine, where production commenced in early January, and approximately 55 km

southeast of the Caribou Mill and deposit that the Company has entered into a definitive agreement to acquire (Figure 2).

\* NI 43-101 compliant resource estimate by Wardrop Engineering Inc., November, 2008

#### **ABOUT TREVALI MINING CORPORATION**

Trevali is a zinc-focused base metals producer with operations in Canada and Peru – the Halfmile and Santander mines respectively. In Canada, Trevali owns the Halfmile zinc-lead-silver mine, the Stratmat polymetallic deposit, and has entered into a definitive agreement to acquire the Caribou Mine and Mill, all located in the Bathurst Mining Camp of northern New Brunswick. The Company also has the past-producing Ruttan copper-zinc mine in northern Manitoba. Production from the Halfmile mine commenced in early 2012 and is ramping up to the planned production rate of 2,000-tonnes-per-day.

In Peru, the Company has the Santander zinc-lead-silver mine and the former-producing Huampar silver mine, both located in the Central Peruvian Polymetallic Belt. Mine commissioning is anticipated to commence at the Santander operation in Q4-2012 with ramp up to full 2,000-tonnes-per-day production to follow shortly thereafter. Additionally through its wholly-owned subsidiary, Trevali Renewable Energy Inc., Trevali is undertaking a significant upgrade of its wholly-owned Tingo run-of-river hydroelectric generating facility along with transmission line upgrades and extensions to allow, in addition to supplying power to the mining operation on the property, the potential sale of surplus power into the Peruvian National Energy Grid.

The common shares of Trevali are listed on the TSX (symbol TV), the OTCQX (symbol TREVF) and on the Lima Stock Exchange (symbol TV). Warrants to purchase common shares of Trevali are listed on the TSX (symbol TV.WT). For further details on Trevali, readers are referred to the Company's web site ([www.trevali.com](http://www.trevali.com)) and to Canadian regulatory filings on SEDAR at [www.sedar.com](http://www.sedar.com).

### **Qualified Person and Quality Control/Quality Assurance**

EurGeol Dr. Mark D. Cruise, Trevali's President and CEO and a qualified person as defined by National Instrument 43-101, has supervised the preparation of the scientific and technical information that forms the basis for this news release. Dr. Cruise is not independent of the Company, as he is an officer and shareholder.

The work program at Stratmat was designed and supervised by, Dayle Rusk, P.Geo - VP-Exploration, Trevali, who is responsible for all aspects of the work, including the quality control/quality assurance programs.

On Behalf of the Board of Directors of

This news release contains "forward-looking statements" within the meaning of the United States private securities litigation reform act of 1995 and "forward-looking information" within the meaning of applicable Canadian securities legislation. Statements containing forward-looking information express, as at the date of this news release, the Company's plans, estimates, forecasts, projections, expectations, or beliefs as to future events or results and the company does not intend, and does not assume any obligation to, update such statements containing the forward-looking information. Such forward-looking statements and information include, but are not limited to statements as to: the accuracy of estimated mineral reserves and resources, anticipated results of future exploration, and forecast future metal prices, anticipated results of future electrical sales and expectations that environmental, permitting, legal, title, taxation, socio-economic, political, marketing or other issues will not materially affect estimates of mineral reserves. These statements reflect the Company's current views with respect to future events and are necessarily based upon a number of assumptions and estimates that, while considered reasonable by the Company, are inherently subject to significant business, economic, competitive, political and social uncertainties and contingencies.

These statements reflect the Company's current views with respect to future events and are necessarily based upon a number of assumptions and estimates that, while considered reasonable by the company, are inherently subject to significant business, economic, competitive, political and social uncertainties and contingencies. Many factors, both known and unknown, could cause actual results, performance or achievements to be materially different from the results, performance or achievements that are or may be expressed or implied by such forward-looking statements contained in this news release and the company has made assumptions and estimates based on or related to many of these factors. Such factors include, without limitation: fluctuations in spot and forward markets for silver, zinc, base metals and certain other commodities (such as natural gas, fuel oil and electricity); fluctuations in currency markets (such as the Peruvian sol versus the U.S. dollar); risks related to the technological and operational nature of the Company's business; changes in national and local government, legislation, taxation, controls or regulations and political or economic developments in Canada, the United States, Peru or other countries where the Company may carry on business in the future; risks and hazards associated with the business of mineral exploration, development and mining (including environmental hazards, industrial accidents, unusual or unexpected geological or structural formations, pressures, cave-ins and flooding); risks relating to the credit worthiness or financial condition of suppliers, refiners

and other parties with whom the Company does business; inadequate insurance, or inability to obtain insurance, to cover these risks and hazards; employee relations; relationships with and claims by local communities and indigenous populations; availability and increasing costs associated with mining inputs and labour; the speculative nature of mineral exploration and development, including the risks of obtaining necessary licenses and permits and the presence of laws and regulations that may impose restrictions on mining; diminishing quantities or grades of mineral reserves as properties are mined; global financial conditions; business opportunities that may be presented to, or pursued by, the Company; the Company's ability to complete and successfully integrate acquisitions and to mitigate other business combination risks; challenges to, or difficulty in maintaining, the Company's title to properties and continued ownership thereof; the actual results of current exploration activities, conclusions of economic evaluations, and changes in project parameters to deal with unanticipated economic or other factors; increased competition in the mining industry for properties, equipment, qualified personnel, and their costs. Investors are cautioned against attributing undue certainty or reliance on forward-looking statements. Although the Company has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated, described or intended. The Company does not intend, and does not assume any obligation, to update these forward-looking statements or information to reflect changes in assumptions or changes in circumstances or any other events affecting such statements or information, other than as required by applicable law.

Trevali's production plans at Halfmile-Stratmat and Santander are based only on Indicated and Inferred Mineral Resources and not Mineral Reserves and do not have demonstrated economic viability. Inferred Mineral Resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as Mineral Reserves, and there is therefore no certainty that the conclusions of the production plans and Preliminary Economic Assessment (PEA) will be realized. Additionally where Trevali discusses exploration/expansion potential, any potential quantity and grade is conceptual in nature and there has been insufficient exploration to define a mineral resource and it is uncertain if further exploration will result in the target being delineated as a mineral resource.

The TSX has not approved or disapproved of the contents of this news release.
