Photo Release -- Alpha and Omega Semiconductor Introduces a New Generation of High Efficiency DrMOS Power Modules

Versatile Synchronous Buck Power Stage Featuring State-of-the-Art Technology

SUNNYVALE, Calif., Aug. 12, 2013 (GLOBE NEWSWIRE) -- [Alpha and Omega Semiconductor](#) (AOS) (Nasdaq:AOSL), a designer, developer and global supplier of a broad range of power semiconductors and power ICs, today introduced [AOZ5066](#), the first of a new generation of high efficiency power modules which are fully compliant with Intel's DrMOS specifications. The AOZ5066 is housed in a 40-pin 6mm x 6mm QFN package that integrates a dual gate driver and two optimized MOSFETs which together produce a high efficiency DC-DC synchronous buck power stage. The new device enables high power density voltage regulator solutions ideal for servers, work stations, graphic cards and high-end desktop PC applications.

A photo accompanying this release is available at <http://www.globenewswire.com/newsroom/prs/?pkgid=20389>

The AOZ5066 utilizes AOS's proprietary state-of-the-art trench MOSFET and packaging technologies to improve efficiency and thermal performance over the previous generation solution. For example, the low-side MOSFET $R_{DS(ON)}$ of 1m Ω combined with the low Qg high-side MOSFET achieves an optimal balance between switching and conduction losses to increase overall efficiency by 1% at the 35A I_{OUT} condition. Robustness is also improved with the higher input voltage and current ratings, 25V and 60A, respectively.

The versatile device works with a variety of analog and digital PWM controllers and is available in two options to support both 3.3V and 5V logic inputs.

"Our new generation of DrMOS meets the ever increasing power density requirements of high-end computing applications by reducing the solution size by two-thirds compared to discrete solutions. In addition, the parasitic inductance between the driver and MOSFETs is minimized, allowing switching frequencies to 1MHz and faster dynamic response times," said Daniel Chang, Vice President of Power IC Product Line at AOS.

Pricing and Availability

The AOZ5066 is available immediately in production quantities. The unit price of 1,000 pieces is \$2.15.

About AOS

Alpha and Omega Semiconductor Limited, or [AOS](#), is a designer, developer and global supplier of a broad range of power semiconductors, including a wide portfolio of [Power MOSFET](#), [IGBT](#) and [Power IC](#) products. AOS has developed extensive intellectual property and technical knowledge that encompasses the latest advancements in the power semiconductor industry, which enables us to introduce innovative products to address the increasingly complex power requirements of advanced electronics. AOS differentiates itself by integrating its Discrete and IC semiconductor process technology, product design, and advanced packaging know-how to develop high performance power management solutions. AOS's portfolio of products targets high-volume applications, including portable computers, flat panel TVs, LED lighting, smart phones, battery packs, consumer and industrial motor controls and power supplies for TVs, computers, servers and telecommunications equipment. For more information, please visit www.aosmd.com.

Forward Looking Statements

This press release contains forward-looking statements that are based on current expectations, estimates, forecasts and projections of future performance based on management's judgment, beliefs, current trends and anticipated product performance. These forward-looking statements include, without limitation, references to the efficiency and capability of new products, and the potential to expand into new markets. Forward looking statements involve risks and uncertainties that may cause actual results to differ materially from those contained in the forward-looking statements. These factors include, but are not limited to, the actual product performance in volume production, the quality and reliability of the product, our ability to achieve design wins, the general business and economic conditions, the state of the semiconductor industry, and other risks as described in the Company's annual report and other filings with the U.S. Securities and Exchange Commission. Although the Company believes that the expectations reflected in the forward looking statements are reasonable, it cannot guarantee future results, level of activity, performance, or achievements. You should not place undue reliance on these forward-looking

statements. All information provided in this press release is as of today's date, unless otherwise stated, and AOS undertakes no duty to update such information, except as required under applicable law.
