

## **Sustainability Initiatives**

At AutoNation, Inc., our commitment to minimizing our environmental impact drives our sustainability efforts. In 2020, our Company-wide sustainability efforts resulted in:

- 3,251,709 gallons of used motor oil recycled
- 360,710 gallons of used oil filters recycled
- 37,627 lead-acid batteries recycled
- 19,399,678 pounds of everyday products recycled
- 2,151,144 pounds of cardboard recycled

The numbers above were derived from reports made available to AutoNation by our national partners (Safety-Kleen, Quest Resource Management, Factory Motor Parts, and ENGIE Insight). These numbers do not comprise of all of AutoNation's sustainability efforts for 2020.

In addition, we have helped reduce 26,874 metric tons of Greenhouse Gas Emissions by participating in Quest Resource Management Group and Safety-Kleen's Closed-Loop Recycling Programs in 2020. AutoNation also participates in a national tire recycling program through Quest Resource Management Group. On average, 8% of Company-wide tires were re-sold and 35% of tires were processed into tire-derived fuel ("TDF") in 2020.
