

ChargePoint Releases an Enhanced Integrated Charging Experience for Fleets En-Route and At Home

4/25/2024

CAMPBELL, Calif.--(BUSINESS WIRE)-- **ChargePoint** (NYSE: CHPT), a leading provider of networked charging solutions for electric vehicles (EVs), announced today enhancements to its software offering which enables electric and mixed fuel fleets to find, use, and pay for charging from a single application, including seamless driver reimbursement when they charge their company EV at home.

“We continue to bring to market new, innovative solutions that enable a frictionless charging experience for EV drivers and fleet operators alike,” said Rich Mohr, SVP, Americas at ChargePoint. “We are committed to enabling an unmatched driver experience with solutions such as home charging reimbursement, while also giving our customers optimal fleet management tools to minimize total cost of ownership.”

Derived from the successful line of in-dash software solutions ChargePoint supplies to more than a dozen automotive manufacturers, the software is available to fleet operators in app format. Critically for larger fleet management companies, the option to integrate the technology into their existing branded fleet offering via ChargePoint's open API is available.

To maximize the benefits of the enhanced software, organizations that manage take-home fleets can purchase ChargePoint's Home Flex residential charging station for their drivers, enabling reimbursement for home charging. With this integration, company EV drivers can conveniently charge at home, eliminating the time and labor costs of stopping during the workday to fuel, and simultaneously reduce costs thanks to lower residential electricity rates. When a driver needs to charge on the road, the software enables access to more than 900,000 global charging locations¹. An early partner integrating this ChargePoint technology within their own offering is fuel card provider WEX.

The software includes a comprehensive **portfolio of solutions** which enable fleet operators to gain enhanced insight and metrics into driver performance, including preferred pricing, proactive monitoring, and reporting. Comprehensive reports on charging activity, energy usage and costs help fleet operators identify opportunities for

efficiency based on when and where their drivers charge.

About ChargePoint Holdings, Inc.

ChargePoint is creating a new fueling network to move people and goods on electricity. Since 2007, ChargePoint has been committed to making it easy for businesses and drivers to go electric with one of the largest EV charging networks and a comprehensive portfolio of charging solutions. The ChargePoint cloud subscription platform and software-defined charging hardware are designed to include options for every charging scenario from home and multifamily to workplace, parking, hospitality, retail and transport fleets of all types. Today, one ChargePoint account provides access to hundreds-of-thousands of places to charge in North America and Europe.
