Total	154.5	161	101	120	175	

⁽¹⁾Highway deicing sales volume includes roadway maintenance products sold in the U.S., Canada and U.K. as well as rock salt sold for chemical production. The 10-year averages are the mean highway deicing sales volumes for the periods ended in the 2017-2018 season.

⁽²⁾The tables show the number of snow events in 11 cities in Compass Minerals' primary North American deicing market compared with the 10-year average number of snow events, which is the mean number of snow events for the periods ended in the 2017-2018 season. Snow events are defined as 24-hour periods with at least 1 inch, or about 2.5 centimeters, of snow. The number of snow events reported may not directly correlate to Compass Minerals' deicing results due to a variety of factors, including the relative significance to our business of the region each city represents. The weather data should be used only as an indicator of year-to-year variations in winter weather conditions in these markets.
