Hyve Solutions Creates Ambient Series for OCP Open Rack to Deliver Substantial Energy Savings

San Jose, CA, - (from the OCP Summit V) - January 28, 2014 - [Hyve Solutions](#), a division of [SYNNEX Corporation](#) (NYSE: SNX), and a Platinum Open Compute Project member providing leading OCP solutions, launched its new front I/O optimized datacenter servers today from the Open Compute Project Summit in San Jose, California. The Hyve Solutions Ambient Series for OCP is designed to fit the OCP Open Rack specification and is optimized to run hotter and can be efficiently cooled by the ambient air within its global customers' datacenters, helping them to realize substantial energy savings without sacrificing quality.

The Hyve Solutions Ambient Series for OCP is a novel design approach that combines a variety of compute and storage options ranging from high capacity to high IOPS. This OCP form factor allows for even further storage density than the traditional 19" Hyve Solutions Ambient Series products.

"The Hyve Solutions Ambient Series for OCP Open Rack provides another important option for server and storage customers looking to reduce their TCO through lower acquisition, service and energy costs," said Steve Ichinaga, Senior Vice President and General Manager, Hyve Solutions. "The product design offers additional density options, enriching the OCP lineup and broadening the adoption of OCP in the overall market."

Datacenter customers can source Hyve Solutions Ambient Series for OCP Open Rack servers direct from Hyve Solutions or through authorized Hyve Solutions resellers. To learn more about OCP solutions through Hyve Solutions, visit www.hyvesolutions.com, email sales@hyvesolutions.com or follow us on Twitter at @hyvesolutions.
